Spoken Multimodal Human-Computer Dialogue in Mobile Environments Wolfgang Minker,Dirk Bühler,Laila Dybkjær,2005-08-17 This book is based on publications from the

ISCA Tutorial and Research Workshop on Multi-Modal Dialogue in Mobile Environments held at Kloster Irsee, Germany, in 2002. The workshop covered various aspects of development and evaluation of spoken multimodal dialogue systems and components with particular emphasis on mobile environments, and discussed the state-of-the-art within this area. On the development side the major aspects addressed include speech recognition, dialogue management, multimodal output generation, system architectures, full applications, and user interface issues. On the evaluation side primarily usability evaluation was addressed. A number of high quality papers from the workshop were selected to form the basis of this book. The volume is divided into three major parts which group together the overall aspects covered by the workshop. The selected papers have all been extended, reviewed and improved after the workshop to form the backbone of the book. In addition, we have supplemented each of the three parts by an invited contribution intended to serve as an overview chapter.

Airlines in a Post-Pandemic World Nawal K. Taneja, 2021-06-08 The COVID-19 pandemic

represents an extraordinary inflection point that caught airlines worldwide unprepared, causing CEOs to recalibrate their business models. This book explains why this unprecedented pandemic is different from the past disruptions experienced by the airline industry during the past 50 years, and what airlines and related businesses now can do to adapt to the dramatically changed marketplace. This book presents two future scenarios: continuous improvements and elastic supply. These are considered in three specific contexts for the rebuilding of the airline business. These contexts, in the order of urgency with respect to change from the status quo, are the following. The first context is for airlines to become better prepared to deal with frequent and deeper disruptions that could be localized or globalized relating to such areas as climate change, geopolitics, and cybersecurity. The second context is to collaborate and integrate within the much broader travel ecosystem, possibly using platforms to innovate on new value systems. The third context, which has always been the case and drives the first two, is for airlines to offer real solutions to people's travel needs, solutions developed with imagination and turbocharged innovation, even as we contemplate new technology airplanes and mobility as a service solutions. This book is recommended reading for all senior-level practitioners of airlines and related businesses, as well as aviation policy makers worldwide.

The 12 revised full papers presented together with one invited paper were carefully reviewed and selected from 23 submissions. Among the topics addressed are model representation, model checking, probabilistic systems analysis, refinement, Markov chains, random variables, stochastic timed systems, Max-Plus algebra, process algebra, system modeling, and the Mobius modeling framework.

Tourism Economics Álvaro Matias, Peter Nijkamp, Manuela Sarmiento, 2011-07-28 The assessment of local, regional or national impacts of an influx of tourists – of different kind and origin – has in recent years become a new challenge for economics research in the tourism sector. There is a clear need to develop solid methodologies through which the socio-economic impacts of tourism can be assessed. Tourism impact assessment – as a systematic approach to the estimation of socio-economic effects of tourism on relevant parts of the economy – has become a timely response to the need for appropriate information for stakeholders, both public and private. The present volume brings together a set of recent impact studies – of both a theoretical-methodological and an applied policy-oriented nature – , which have been selected on the basis of their originality or novel contribution to the research in this field.

Tourism Theory Guilherme Lohmann, Alexandre Panosso Netto, 2016-12-07 Theories within tourism can be difficult, even confusing areas to understand. Developed from the successful Portuguese textbook *Teoria do Turismo*, *Tourism Theory* provides clear and

thorough coverage of all aspects of tourism theory for students and researchers of tourism. Consisting of five sections and over fifty entries, this book covers nine of the most important models in tourism study. The first three sections examine general concepts in tourism; disciplines and topics; and the tourist, which includes areas such as demand, gaze, psychology and typologies. A fourth section covers intermediation, distribution and travel, reviewing aspects such as travel agencies, tourist flows and multi-destination travel patterns. The final section encapsulates the tourism destination itself, covering organizations, the destination image, supply, seasonality and more. Encyclopedic cross-referencing between entries makes navigation easy, while in-depth analysis, exercises and further reading suggestions for each of the selected areas provide the context and detail needed for understanding. Entries can be used individually as a reference, or as part of the whole for a complete introduction to tourism theory.

Drive Tourism Bruce Prideaux, Dean Carson, 2010-11-03 Since the post World War Two boom in private automobile ownership, Drive Tourism has transformed the tourism landscape by facilitating dispersal and the growth of attractions and tourism related infrastructure beyond the zones that had previously emerged around seaports and railway terminals. The automobile has made regional dispersal possible and created opportunities

for many small rural communities to supplement rural economies with a tourism economy. Drive Tourism is a popular form of tourism activity that has significantly contributed to the development of Tourism in many nations, but has received relatively little attention in the literature. This book is the first attempt to provide a global comprehensive review and scholarly investigation into this popular and growing form of tourism. It draws on a vast range of geographical locations to critically explore the impacts of drive tourism in developed and underdeveloped regions. It evaluates tourism authorities' response to the Drive Tourism Experience, and offers operational insights into the management of the drive experience as well as providing original empirical research and insights into the field that will contribute to future investigation. In doing so it explores the many forms of drive tourism from caravanning to fly drive touring.

Separable Programming S.M. Stefanov, 2013-11-11 In this book, the author considers separable programming and, in particular, one of its important cases - convex separable programming. Some general results are presented, techniques of approximating the separable problem by linear programming and dynamic programming are considered. Convex separable programs subject to inequality/ equality constraint(s) and bounds on variables are also studied and iterative algorithms of polynomial complexity are proposed. As an application, these algorithms are used in the implementation of stochastic quasigradient methods to some separable stochastic programs. Numerical approximation with respect to l_1 and l_4 norms, as a convex separable nonsmooth unconstrained minimization problem, is considered as well. Audience: Advanced undergraduate and graduate students, mathematical programming/ operations research specialists.
