The Jewish Pesach and the Origins of the Christian Easter Clemens Leonhard,2012-02-14 The study assesses the main issues in the current debate about the early history of Pesach and Easter and provides new insights into the development of these two festivals. The author argues that the prescriptions of Exodus 12 provide the celebration of the Pesach in Jerusalem with an etiological background in order to connect the pilgrim festival with the story of the Exodus. The thesis that the Christian Easter evolved as a festival against a Jewish form of celebrating Pesach in the second century and that the development of Easter Sunday is dependent upon this custom is endorsed by the author's close study of relevant texts such as the Haggada of Pesach; the "Poem of the four nights" in the Palestinian Targum Tradition; the structure of the Easter vigil.

Introduction to Mathematical Sociology Phillip Bonacich,Philip Lu,2012-04 A comprehensive textbook on the tools of mathematical sociology and their applications. Mathematical models and computer simulations of complex social systems have become everyday tools in sociology. Yet until now, students had no up-to-date textbook from which to learn these techniques. Introduction to Mathematical Sociology fills this gap, providing undergraduates with a comprehensive, self-contained primer on the mathematical tools and applications that sociologists use to understand social behavior. Phillip Bonacich and Philip Lu cover all the essential mathematics, including linear algebra, graph theory, set theory, game theory, and probability. They show how to apply these mathematical tools to demography; patterns of power, influence, and friendship in social networks; Markov chains;

the evolution and stability of cooperation in human groups; chaotic and complex systems; and more. Introduction to Mathematical Sociology also features numerous exercises throughout, and is accompanied by easy-to-use Mathematica-based computer simulations that students can use to examine the effects of changing parameters on model behavior. Provides an up-to-date and self-contained introduction to mathematical sociology Explains essential mathematical tools and their applications Includes numerous exercises throughout Features easy-to-use computer simulations to help students master concepts

Moved by the Past Eelco Runia, 2014-05-06 Historians go to great lengths to avoid confronting discontinuity, searching for explanations as to why such events as the fall of the Berlin Wall, George W. Bush's invasion of Iraq, and the introduction of the euro logically develop from what came before. *Moved by the Past* radically breaks with this tradition of predating the past, incites us to fully acknowledge the discontinuous nature of discontinuities, and proposes to use the fact that history is propelled by unforeseeable leaps and bounds as a starting point for a truly evolutionary conception of history. Integrating research from a variety of disciplines, Eelco Runia identifies two modes of being moved by the past: regressive and revolutionary. In the regressive mode, the past may either overwhelm us—as in nostalgia—or provoke us to act out what we believe to be solidly dead. When we are moved by the past in a revolutionary sense, we may be said to embody history: we burn our bridges behind us and create accomplished facts we have no choice but to live up to. In the final thesis of *Moved by the Past*, humans energize their own evolution by habitually creating situations (catastrophes or sublime historical events) that put a premium on mutations. This book therefore illuminates how

every now and then we chase ourselves away from what we were and force ourselves to become what we are. Proposing a simple yet radical change in perspective, Runia profoundly reorients how we think and theorize about history.

Impact of Market Forces on Addictive Substances and Behaviours David Miller, Claire Harkins, Matthias Schlögl, Brendan Montague, 2018 Impact of Market Forces on Addictive Substances and Behaviours examines the 'web of influence' formed by industries which manufacture and sell addictive products and trade associations and policy intermediaries such as lobbyists and think tanks in the EU. Using a new dataset on these corporate networks, it quantifies the strength of the connections between the actors in these webs, and uses this data to guide qualitative studies on the content of corporate strategy and, specifically, on corporations' attempts to 'capture' policy and three crucial ancillary domains: science, civil society, and the news and promotional media.--

The Self-Discipline Manual Peter Hollins, 2022-08-16 How to truly live a MIND OVER MATTER life. Most people can't accomplish what they want. They let themselves underachieve, and don't have the energy to do better. But you are different. You will learn how the true meaning of mind over matter. Learn to fulfill every intention you have - because nothing can stop you. The Self-Discipline Manual is about training you (yes, training) achieve everything that you want, and nothing less. It's about understanding what causes motivation and self-discipline, and how to attack your daily tasks, habits, or goals with the fire of a thousand suns. We attack this issue of you versus yourself from every possible angle, and you will be well-armed to face your lazy and procrastinating ways. Extremely thorough, researched,

and most importantly, actionable. Peter Hollins has studied psychology and peak human performance for over a dozen years and is a bestselling author. He has worked with a multitude of individuals to unlock their potential and path towards success. His writing draws on his academic, coaching, and research experience. How to make self-discipline automatic, second nature, and habitual. The biology of self-control and how to hack your body's limitations. Understanding all the roadblocks to motivation and self-control - almost all are psychological. Why you must start managing your TIME, not your energy. The role your neurotransmitters play in self-discipline. Clarifying your areas of control and interest for maximum adherence. How to make discomfort your best friend. How to surf the urge and zazen. Emotional kung fu and how to use your emotions to your advantage. Tools to get started, keep going, overcome distractions, and follow through every single time. Self-discipline is the ability to do what you don't want to do. It allows you to push through, conquer, and achieve. Without this gritty trait, nothing is possible in life. Keep that in mind.

Third World America Arianna Huffington, 2010-09-07

It's not an exaggeration to say that middle-class Americans are an endangered species and that the American Dream of a secure, comfortable standard of living has become as outdated as an Edsel with an eight-track player. That the United States of America is in danger of becoming a third world nation. The evidence is all around us: Our industrial base is vanishing, taking with it the kind of jobs that have formed the backbone of our economy for more than a century; our education system is in shambles, making it harder for tomorrow's workforce to acquire the information and training it needs to land good twenty-first century jobs; our infrastructure—our roads, our bridges, our sewage and water, our transportation and electrical systems—is

crumbling; our economic system has been reduced to recurring episodes of Corporations Gone Wild; our political system is broken, in thrall to a small financial elite using the power of the checkbook to control both parties. And America's middle class, the driver of so much of our economic success and political stability, is rapidly disappearing, forcing us to confront the fear that we are slipping as a nation – that our children and grandchildren will enjoy fewer opportunities and face a lower standard of living than we did. It's the dark flipside of the American Dream – an American Nightmare of our own making. Arianna Huffington, who, with the must-read Huffington Post, has her finger on the pulse of America, unflinchingly tracks the gradual demise of America as an industrial, political, and economic leader. In the vein of her fiery bestseller *Pigs at the Trough*, *Third World America* points fingers, names names, and details who's killing the American Dream. Finally, calling on the can-do attitude that is part of America's DNA, Huffington shows precisely what we need to do to stop our freefall and keep America from turning into a third world nation. *Third World America* is a must-read for anyone disturbed by our country's steady descent from 20th century superpower to backwater banana republic.

Educational Psychology Australian Edition Anita Woolfolk, Kay Margetts, 2012-07-25 Learning and teaching is an integrated process, and theory and practice cannot be separated. As in the previous Australasian edition, *Educational Psychology 3e* continues to emphasise the educational implications and applications of child development, cognitive science, learning and teaching. Recurring themes throughout the text include ideas about education; social and socio-cultural aspects of education; schools, families and community; development, learning

and curriculum; and effective teaching. Author Kay Margetts incorporates Australasian perspectives and applications using the work of Australasian researchers and teachers. Numerous examples, case studies, guidelines and practical tips from experienced teachers are used in the text to explore the connections between knowledge, understanding and practice.

Algorithms Are Not Enough Herbert L.

Roitblat,2020-10-13 Why a new approach is needed in the quest for general artificial intelligence. Since the inception of artificial intelligence, we have been warned about the imminent arrival of computational systems that can replicate human thought processes. Before we know it, computers will become so intelligent that humans will be lucky to kept as pets. And yet, although artificial intelligence has become increasingly sophisticated—with such achievements as driverless cars and humanless chess-playing—computer science has not yet created general artificial intelligence. In *Algorithms Are Not Enough*, Herbert Roitblat explains how artificial general intelligence may be possible and why a robopocalypse is neither imminent, nor likely. Existing artificial intelligence, Roitblat shows, has been limited to solving path problems, in which the entire problem consists of navigating a path of choices—finding specific solutions to well-structured problems. Human problem-solving, on the other hand, includes problems that consist of ill-structured situations, including the design of problem-solving paths themselves. These are insight problems, and insight is an essential part of intelligence that has not been addressed by computer science. Roitblat draws on cognitive science, including psychology, philosophy, and history, to identify the essential features of intelligence needed to achieve general artificial intelligence.

Roitblat describes current computational approaches to intelligence, including the Turing Test, machine learning, and neural networks. He identifies building blocks of natural intelligence, including perception, analogy, ambiguity, common sense, and creativity. General intelligence can create new representations to solve new problems, but current computational intelligence cannot. The human brain, like the computer, uses algorithms; but general intelligence, he argues, is more than algorithmic processes.
