The Palgrave Handbook of Natural Gas and Global Energy Transitions Damilola S. Olawuyi,Eduardo G. Pereira,2022-05-04

The Palgrave Handbook of Natural Gas and Global Energy Transitions provides an in-depth and authoritative examination of the transformative implications of the ongoing global energy transitions for natural gas markets across the world. With case studies from Africa, Asia, Europe, North America, Latin America, South America, Australia, and the Middle East, the volume introduces readers to the latest legal, policy, technological, and fiscal innovations in natural gas markets in response to ongoing global energy transitions. It outlines the risk mitigation strategies and contractual techniques – focusing on resilience planning, low-carbon business models, green procurement, climate-smart infrastructure development, accountability, gender justice, and other sustainability safeguards – that are required to maximize the full

value of natural gas as a catalyst for a just and equitable energy transition and for energy security across the world. Written in an accessible style, this book outlines the guiding principles for a responsible and low-carbon approach to the design, financing, and implementation of natural gas development and commercialization. It is an indispensable text and reference work for students, scholars, practitioners, and stakeholders in natural gas, energy, infrastructure, and environmental investments and projects.

Multi-stakeholder Governance and the Internet Governance

Forum Jeremy Malcolm, 2008 Multi-stakeholder governance is a fresh approach to the development of transnational public policy, bringing together governments, the private sector and civil society in partnership. The movement towards this new governance paradigm has been strongest in areas of public policy involving global networks of stakeholders, too intricate to be represented by governments alone. Nowhere is this better illustrated than on the Internet, where it is an inherent characteristic of the network that laws, and the behaviour to which those laws are directed, will cross national borders; resulting not only in conflicts between national

regimes, but also running up against the technical and social architecture of the Internet itself. In this book, Jeremy Malcolm examines the new model of multi-stakeholder governance for the Internet regime that the Internet Governance Forum (IGF) represents. He builds a compelling case for the reform of the IGF to enable it to fulfil its mandate as an institution for multi-stakeholder Internet governance.--Provided by publisher.

Maritime Skills on Vessels & Shore – The STCW Convention's Relevance & Recommendations Dr. (Capt.) Vivek Jain, 2023-07-11

This Book is of the seafarers, by the seafarers, for the seafarers Seafarers are the core of all maritime trade and their expectations/perspectives alone should be at the centre of all solutions for maritime skills. Taking this standpoint, the editor has explored the issues of maritime skills with critical gaps following a framework of research methodology. The issue of critical gaps in maritime skills is further exacerbated due to the impact on seafarers caused by changes in – the ecosystem, status & relationship with stakeholders, technology, focus on renewable energy, anxiety levels and so forth. Furthermore, stakeholders can no longer ignore the fact that seafarers are leaving a seagoing career after working for only a few years. Therefore, the editor has

also explored the need to prepare seafarers for transition into maritime shore jobs to preserve their maritime skills within the maritime industry. This exhaustive book can be used as a guide for further revisions or a revamp of the current STCW Convention. The editor thereafter divided the researched critical gaps in maritime skills into four groups (Jain's Model for Maritime Skills) – Panoptic, Social Intelligence, Upskilling & Reskilling for onboard vessels skills, and Portable Skills for future shore jobs. Panoptic and Social Skills are core skills required for both on board vessels as well for maritime shore jobs. Thereafter, the editor embarked on a voyage to discover, persuade, collaborate with a number of exceptionally experienced subject-matter experts over many months to collaboratively pursue many mini-research projects across all selected maritime skills, adopting specific methodology to plug these critical gaps. These experts were drawn – (1) from countries such as India, the Philippines, Romania, South Korea, Malaysia, UAE, the UK and Singapore, (2) from both genders, (3) from deck, engine & professionals settled ashore, (4) with current experience in the industry and/or at sea at a fundamental level, and (5) from seafaring-supplying nations, recognising/experiencing the relevant socio-economic circumstances of seafarers. From this book,

seafarers will not only find ideas on how to plug gaps in their maritime skills, but also how they can transition with their existing skills to other maritime jobs, such as marine superintendents, marine managers, designated persons ashore, managers supervising new build/second-hand vessels, IT managers in the maritime domain, marine surveyors, marine experts/investigators, marine pilots in ports, maritime arbitrators, managers in shipyards and so forth. The solutions in this book will also resolve the issue of the shortage and retention of seafarers.

Unmanned and Autonomous Ships R. Glenn

Wright,2020-03-11 Unmanned ships and autonomous ships are quickly becoming a reality, making shipping safer and more efficient. However, traditional tasks and functions are becoming blurred as new technology changes how the unique needs of different sectors are met. In addition to large vessels dedicated to the transport of goods and cargos across the oceans, major efforts are underway towards the automation of small coastal shipping that includes ferries, tugboats, supply and service vessels, and barges. Automated vehicles are also replacing conventional ships for inspecting and servicing pipelines, drilling platforms, wind farms and other offshore installations. Automated shipping is explored in terms of economics, technology, safety and the environment under

the broad themes of ship design and engineering, command and control, navigation, communications, security, regulatory issues, and training. This includes initiatives for autonomous shipping as well as civilian implications of military ship automation programs. This book is primarily for maritime professionals, regulatory authorities, insurers, and environmental groups. It also suits undergraduate students involved in deck officer training, and graduate students and academics involved in research in ship design, operations and management.

The Circadian Code Satchin Panda, PhD, 2020-02-11 When we eat may be as important as what we eat. Like most people, you probably wake up, get hungry for meals and doze off in bed around the same time every day. But for some people, that imbalance—difficulty sleeping at night, hunger at odd times, or sudden fatigue at noon—is a constant. If you're one of those people, Dr. Satchin Panda, one of the leading researchers on circadian rhythms, has a plan to reset your body clock. Beginning with an in-depth explanation of the circadian clock—why it's important, how it works, and how to know it isn't working—*The Circadian Code* outlines

lifestyle changes to make to get back on track. It's a concrete plan to enhance weight loss, improve sleep, optimize exercise, and manage technology so that it doesn't interfere with your body's natural rhythm. Dr. Panda's life changing methods show you how to prevent and reverse ailments like diabetes, cancer, and dementia, as well as microbiome conditions like acid reflux, heartburn, and irritable bowel disease.
