**The Underdogs** Mariano Azuela, 2008-07-29 The greatest novel of the Mexican Revolution, in a brilliant new translation by an award-winning translator The Underdogs is the first great novel about the first great revolution of the twentieth century. Demetrio Macias, a poor, illiterate Indian, must join the rebels to save his family. Courageous and charismatic, he earns a generalship in Pancho Villa's army, only to become discouraged with the cause after it becomes hopelessly factionalized. At once a spare, moving depiction of the limits of political idealism, an authentic representation of Mexico's peasant life, and a timeless portrait of revolution, The Underdogs is an iconic novel of the Latin American experience and a powerful novel about the disillusionment of war.

**Teaching Literature in Translation** Brian James Baer, Michelle Woods, 2022-07-29 The teaching of texts in translation has become an increasingly common practice, but so too has the teaching of texts from languages and cultures with which the instructor may have little or no familiarity. The authors in this volume present a variety of pedagogical approaches to promote translation literacy and to address the distinct phenomenology of translated texts. The approaches set forward in this volume address the nature of the translator's task and how texts travel across linguistic and cultural boundaries in translation, including how they are packaged for new audiences, with the aim of fostering critical reading practices that focus on translations as translations. The organizing principle of the book is the specific pedagogical contexts in which translated texts are being used, such as courses on a single work, survey courses on a single national literature or a single author, and courses on world literature. Examples are provided from the widest possible variety of world languages and literary traditions, as well as modes of writing (prose, poetry, drama, film, and religious and historical texts) with the aim that many of the pedagogical approaches and strategies can be easily adapted for use with other works and traditions. An introductory section by the editors, Brian James Baer and Michelle Woods, sets the theoretical stage for the volume. Written and edited by authorities in the field of literature and translation, this book is an essential manual for all instructors and lecturers in world and comparative literature and literary translation.

In addition to describing analytical and numerical techniques for exploring the theoretical basis of electron–light interactions, the book showcases a number of relevant case studies, such as optical modes in gold tapers probed by electron beams and investigations of optical excitations in the topological insulator Bi<sub>2</sub>Se<sub>3</sub>.
