Sophie's World Jostein Gaarder, 2007-03-20 One day Sophie comes home from school to find two questions in her mail: Who are you? and Where does the world come from? Before she knows it she is enrolled in a correspondence course with a mysterious philosopher. Thus begins Jostein Gaarder's unique novel, which is not only a mystery, but also a complete and entertaining history of philosophy.

Dreams of Earth and Sky Freeman Dyson, 2015-04-21 In this sequel to *The Scientist as Rebel* (2006), Freeman Dyson—whom *The Times* of London calls “one of the world’s most original minds”—celebrates openness to unconventional ideas and “the spirit of joyful dreaming” in which he believes that science should be pursued. Throughout these essays, which range from the creation of the Royal Society in the seventeenth century to the scientific inquiries of the Romantic generation to recent books by Daniel Kahneman and Malcolm Gladwell, he seeks to “break down the barriers that separate science from other sources of human wisdom.” Dyson discusses twentieth-century giants of physics such as Richard Feynman, J. Robert Oppenheimer, Paul Dirac, and Steven Weinberg, many of whom he knew personally, as well as Winston Churchill’s pursuit of nuclear weapons for Britain and Wernher von Braun’s pursuit of rockets for space travel. And he takes a provocative, often politically incorrect approach to some of today’s most controversial scientific issues: global warming, the current calculations of which he thinks are probably wrong; the future of biotechnology, which he expects to dominate our lives in the next half-century as the tools to design new living creatures become available to everyone; and the flood of information in the digital age. Dyson offers fresh perspectives on the history, the philosophy, and the practice of scientific inquiry—and even on the blunders, the wild guesses and wrong theories that are also part of our struggle to understand the wonders of the natural world.

Einstein's Dreams Alan Lightman, 2011-03-02 NATIONAL BESTSELLER • A modern classic explores the connections between science and art, the process of creativity, and ultimately the fragility of human existence. “A magical, metaphysical realm ... Captivating, enchanting, delightful.” —*The New York Times* *Einstein's Dreams* is a fictional collage of stories dreamed by Albert Einstein in 1905, about time, relativity and physics. As the defiant but sensitive young genius is creating his theory of relativity, a new conception of time, he imagines many possible worlds. In one, time is circular, so that people are fated to repeat triumphs and failures over and over. In another, there is a place where time stands still, visited by lovers and parents clinging to their children. In another, time is a nightingale, sometimes trapped by a bell jar. Now translated into thirty languages, *Einstein's Dreams* has inspired playwrights, dancers, musicians, and painters all over the world. In poetic vignettes, it

explores the connections between science and art, the process of creativity, and ultimately the fragility of human existence.

Modern Physics Paul Allen Tipler, 1978 For the intermediate-level course, the Fifth Edition of this widely used text takes modern physics textbooks to a higher level. With a flexible approach to accommodate the various ways of teaching the course (both one- and two-term tracks are easily covered), the authors recognize the audience and its need for updated coverage, mathematical rigor, and features to build and support student understanding. Continued are the superb explanatory style, the up-to-date topical coverage, and the Web enhancements that gained earlier editions worldwide recognition. Enhancements include a streamlined approach to nuclear physics, thoroughly revised and updated coverage on particle physics and astrophysics, and a review of the essential Classical Concepts important to students studying Modern Physics.

The Golden Age John C. Wright, 2003-04-14 The Golden Age is Grand Space Opera, a large-scale SF adventure novel in the tradition of A. E. Van Vogt and Roger Zelazny, with perhaps a bit of Cordwainer Smith enriching the style. It is an astounding story of super science, a thrilling wonder story that recaptures the excitements of SF's golden age writers. The Golden Age takes place 10,000 years in the future in our solar system, an interplanetary utopian society filled with immortal humans. Within the frame of a traditional tale—the one rebel who is unhappy in utopia—Wright spins an elaborate plot web filled with suspense and passion. Phaethon, of Radamanthus House, is attending a glorious party at his family mansion to celebrate the thousand-year anniversary of the High Transcendence. There he meets first an old man who accuses him of being an impostor and then a being from Neptune who claims to be an old friend. The Neptunian tells him that essential parts of his memory were removed and stored by the very government that Phaethon believes to be wholly honorable. It shakes his faith. He is an exile from himself. And so Phaethon embarks upon a quest across the transformed solar system—Jupiter is now a second sun, Mars and Venus terraformed, humanity immortal—among humans, intelligent machines, and bizarre life forms that are partly both, to recover his memory, and to learn what crime he planned that warranted such preemptive punishment. His quest is to regain his true identity. The Golden Age is one of the major, ambitious SF novels of the year and the international launch of an important new writer in the genre. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The Ego Tunnel Thomas Metzinger,2010-05-21 We're used to thinking about the self as an independent entity, something that we either have or are. In *The Ego Tunnel*, philosopher Thomas Metzinger claims otherwise: No such thing as a self exists. The conscious self is the content of a model created by our brain - an internal image, but one we cannot experience as an image. Everything we experience is ''a virtual self in a virtual reality.'' But if the self is not ''real,'' why and how did it evolve? How does the brain construct it? Do we still have souls, free will, personal autonomy, or moral accountability? In a time when the science of cognition is becoming as controversial as evolution, *The Ego Tunnel* provides a stunningly original take on the mystery of the mind.

Dreamland Bob Lazar,2019-10-15 Bob Lazar is the reason Area 51 became infamous in the 1980s and his recent appearance on Joe Rogan's podcast with 7 million listeners is credited with inspiring the Storm Area 51 phenomenon. In his *DREAMLAND* autobiography, Lazar reveals every detail of his highly controversial story about being an insider within the world's most legendary military research base. Bob Lazar was a brilliant young physicist that found himself employed at a top secret facility in the middle of the desert outside Las Vegas. Under the watchful eye of the government elite, he is tasked with understanding an exotic propulsion system being used by an advanced aerospace vehicle he is told came from outer space. The stressful work and long, odd hours start to wear on Bob and he becomes concerned for his safety. He tells his wife and a couple close friends about what he's doing in the desert, and his employers find out and are furious. When they station goons outside his house, Bob seeks help from wealthy UFologist, John Lear, who encourages Bob to take his story to award-winning investigative journalist George Knapp at KLAS-TV, a CBS affiliate. To prove he's telling the truth, Bob takes a group of people out into the desert to watch a test flight of the flying saucer. On the way home, they are stopped by the police, who notify the base, and Bob loses his job. In a series of interviews with CBS TV, Bob Lazar then blows the lid off Area 51, blows the whistle on the effort to conceal this craft from the American people, and blows up his career as a top physicist. Bob Lazar's reports have been the subject of intense controversy for decades. He has been interviewed numerous times and his story has been corroborated by other individuals he worked with and who were present when these events happened. But until now, Bob Lazar has never told his own story, in every detail in his own words, about those exciting days in the desert outside of Las Vegas and how the world came to learn about the experiments being conducted at Area 51.

Great Physicists William H. Cropper,2004-09-16 Here is a lively history of modern physics, as seen through the lives of thirty men and women from the pantheon of physics. William H. Cropper vividly portrays the life and accomplishments of such giants as Galileo and Isaac Newton, Marie Curie and Ernest Rutherford, Albert Einstein and Niels Bohr, right up to contemporary figures such as Richard Feynman, Murray Gell-Mann, and Stephen Hawking. We meet scientists--all geniuses--who could be gregarious, aloof, unpretentious, friendly, dogged, imperious, generous to colleagues or contentious rivals. As Cropper captures their personalities, he also offers vivid portraits of their great moments of discovery, their bitter feuds, their relations with family and friends, their

religious beliefs and education. In addition, Cropper has grouped these biographies by discipline--mechanics, thermodynamics, particle physics, and others--each section beginning with a historical overview. Thus in the section on quantum mechanics, readers can see how the work of Max Planck influenced Niels Bohr, and how Bohr in turn influenced Werner Heisenberg. Our understanding of the physical world has increased dramatically in the last four centuries. With *Great Physicists*, readers can retrace the footsteps of the men and women who led the way.

The Black Star Passes John W. Campbell, 2020-02-15 A sky pirate armed with superior weapons of his own invention, first contact with an alien race dangerous enough to threaten the safety of two planets and the arrival of an unseen dark sun whose attendant marauders aimed at the very end of civilization in this Solar System. These were the first three challenges of many that tested the skill and minds of the brilliant team of scientist-astronauts Arcot, Wade, and Morey.

Sustainable Energy - without the hot air David JC MacKay, 2016-05-14 The enlightening, best-selling book on understanding sustainable energy and how we can make energy plans that add up. If you've ever wondered how much energy we use, and where it comes from – and where it could come from – but are fed up with all the hot air and 'greenwash', this is the book for you. Renewable resources are 'huge', but our energy consumption is also 'huge'. To compare 'huge' things with each other, we need numbers, not adjectives. *Sustainable Energy – without the hot air* addresses the energy crisis objectively, cutting through all the contradictory statements from the media, government, and lobbies of all sides. It gives you the numbers and the facts you need, in bite-sized chunks, so you can understand the issues yourself and organises a plan for change on both a personal level and an international scale – for Europe, the United States, and the world. In case study format, this informative book also answers questions surrounding nuclear energy, the potential of sustainable fossil fuels, and the possibilities of sharing renewable power with foreign countries. Written by David MacKay, who was an esteemed Professor of Engineering at the University of Cambridge and Chief Scientific Advisor to the UK Department of Climate Change, this is an uplifting, jargon-free and informative read for all. In it, David debunks misinformation and clearly explains the calculations of expenditure per person to encourage people to make individual changes that will benefit the world at large. If you've thrown your hands up in despair thinking no solution is possible, then read this book - it's an honest, realistic, and humorous discussion of all our energy options.

Man and His Symbols Carl G. Jung, 2012-02-01 The landmark text about the inner workings of the unconscious mind—from the symbolism that unlocks the meaning of our dreams to their effect on our waking lives and artistic impulses—featuring more than a hundred images that break down Carl Jung's revolutionary ideas “What emerges with great clarity from the book is that Jung has done immense service both to psychology as a science and to our general understanding of man in society.”—The Guardian “Our psyche is part of nature, and its enigma is limitless.” Since our inception, humanity has looked to dreams for guidance. But what are they? How can we understand them? And how can we use them to shape our lives? There is perhaps no one more equipped to answer these

questions than the legendary psychologist Carl G. Jung. It is in his life's work that the unconscious mind comes to be understood as an expansive, rich world just as vital and true a part of the mind as the conscious, and it is in our dreams—those personal, integral expressions of our deepest selves—that it communicates itself to us. A seminal text written explicitly for the general reader, *Man and His Symbols* is a guide to understanding the symbols in our dreams and using that knowledge to build fuller, more receptive lives. Full of fascinating case studies and examples pulled from philosophy, history, myth, fairy tales, and more, this groundbreaking work—profusely illustrated with hundreds of visual examples—offers invaluable insight into the symbols we dream that demand understanding, why we seek meaning at all, and how these very symbols affect our lives. By illuminating the means to examine our prejudices, interpret psychological meanings, break free of our influences, and recenter our individuality, *Man and His Symbols* proves to be—decades after its conception—a revelatory, absorbing, and relevant experience.

News from Gardenia Robert Llewellyn, 2012-03-23 When Gavin Meckler's light aircraft encounters a mysterious cloud and crashes to earth, he discovers that the eerily quiet landscape in which he has landed is 200 years older than the one from which he took off. In this gentle, peaceful, sustainable new world, it is possible to travel from one side of the globe to the other in a matter of minutes without burning fuel, and everyone is a gardener because that's how they can be sure to eat. Inspired by William Morris's utopian novel *News from Nowhere*, Robert Llewellyn shows us a future where we don't burn anything to make anything else and which isn't hovering on the brink of disaster; where aliens haven't invaded, meteors haven't hit and zombies haven't taken over. In short, a world where humanity eventually gets it right. All the technology described in the novel has seen the light of day in reality. Llewellyn's future isn't perfect and may not be very likely, but it is entirely possible.

Archaeology Anthropology and Interstellar Communication Douglas A. Vakoch, 2015-03-24 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

Homo Deus Yuval Noah Harari, 2017-02-21 Official U.S. edition with full color illustrations throughout. NEW YORK TIMES BESTSELLER Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon *Sapiens*, returns with an equally original, compelling, and provocative book, turning his focus toward humanity's future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people

commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from binging at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda? As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? Homo Deus explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is Homo Deus. With the same insight and clarity that made Sapiens an international hit and a New York Times bestseller, Harari maps out our future.

Rules for Radicals Saul Alinsky, 2010-06-30 "This country's leading hell-raiser (The Nation) shares his impassioned counsel to young radicals on how to effect constructive social change and know "the difference between being a realistic radical and being a rhetorical one." First published in 1971 and written in the midst of radical political developments whose direction Alinsky was one of the first to question, this volume exhibits his style at its best. Like Thomas Paine before him, Alinsky was able to combine, both in his person and his writing, the intensity of political engagement with an absolute insistence on rational political discourse and adherence to the American democratic tradition.
