University Physics: Australian edition Hugh D Young, Roger A Freedman, Ragbir Bhathal, 2010-08-04 This book is the product of more than half a century of leadership and innovation in physics education. When the first edition of

University Physics by Francis W. Sears and Mark W. Zemansky was published in 1949, it was revolutionary among calculus-based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them. The success of University Physics with generations of (several million) students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently. In preparing this First Australian SI edition, our aim was to create a text that is the future of Physics Education in Australia. We have further enhanced and developed University Physics to assimilate the best ideas from education research with enhanced problem-solving instruction, pioneering visual and conceptual pedagogy, the first systematically enhanced problems, and the most pedagogically proven and widely used online homework and tutorial system in the world, Mastering Physics.

Construction Technology for Builders Glenn Costin, 2020-06-26 Construction Technology for Builders, 1e addresses requirements of the Certificate IV in Building and Construction (Building). The text addresses 14 competency units with learning activities and work sheets for downloading. The chapters are aligned to specific competency units, and the material in this text requires, and emphasises that the reader engage with Standards and Codes such as the

NCC. Communication is a critical component of the building and construction process and the preparation of sketches and drawings is a vital part of that communication skill set; the text has a dedicated chapter on preparing building sketches and drawings. There are two chapters on structures, the first introducing the concepts underlying structural principles, and underpins the following chapter that applies this knowledge to the various elements of a building. Additional learning material, such as plans and specifications is provided in the Appendices to assist with the understanding of examples and exercises in the text.
