Automobile Insurance Subrogation: In All 50 States Gary L. Wickert, 2012-01-01 Automobile Insurance Subrogation: In All 50 States is the most thorough, comprehensive, and ambitious anthology of subrogation-related legal information and insurance resources ever put to paper. It is the last and most anticipated of the subrogation trilogy, and a book which will serve as the "bible" for any insurance company writing personal lines or commercial auto policies. It is destined to become the standard work and reference for attorneys, insurance companies, and subrogation industry professionals. Every year there are more than 7 million auto accidents in the United States with a financial toll of more than \$300 billion. Nearly 3 million people are injured and 42,636 people are killed. In the overwhelming majority of these accidents there is at least one party at fault. For virtually every one of these accidents, a policy of automobile insurance provides some sort of claim payments or benefits. In the vast majority of those claims, one or more insurance policies and/or applicable state law grants the insurer a right of subrogation against a negligent third party whose carelessness caused the accident. This book is the bible on subrogating those claims. This book covers the nuts and bolts of auto subrogation in all 50 states, covering every topic imaginable -- including PIP, Med Pay, UM/UIM, property claims, deductible reimbursement, no-fault subrogation and more. It surveys the laws of every state and provides descriptions of every type of auto coverage imaginable, as well as the statutory, case law, and regulatory authority governing every aspect of auto subrogation. If you have subrogation responsibility involving auto claims, you need this book. It universally covers issues which are indelibly interwoven into the business of auto insurance, including a complete treatment of the laws of all 50 states and the District of Columbia relating to: • Basic and Statutory Subrogation Rights • Mandatory vs. Optional Insurance Coverage • No-Fault Laws, PIP, Mini-Torts, and Loss Transfer Laws • Tort Limitations • Medical Payments Coverage and Subrogation • Uninsured/Underinsured Motorist Coverage and Subrogation • Collision/Property Subrogation • Release of Tortfeasor by Insured • Accord and Satisfaction: Accepting Partial Payments from Tortfeasor • Made Whole Doctrine • Common Fund Doctrine • Economic Loss Doctrine • Deductible Recovery and Reimbursement • Collateral Source Rule • Contributory Negligence/Comparative Fault • Seat Belt Laws and Defenses • Rental Cars, Loaner Vehicles, and Test Drivers • Bailment/Parking Lot Liability • Negligent Entrustment • Facing Multiple Claims In Excess of Liability Policy Limits • Conflict of Laws/Interstate Subrogation • Recovery of Attorney's Fees and Costs • Statutes of Limitations It is a complete treatment -- A to Z -- of virtually every issue which the insurance claims or subrogation professional will face in the area of automobile insurance. It is like no legal treatise ever written and promises to be the most used reference in any insurance company.

Business Process Management Andreas Gadatsch,2023-05-27 This textbook bridges the gap between business management and organisational methods and their digital implementation, because process management increasingly means designing operational tasks. In addition to methodological basics, the work offers many practical examples and exercises. Prof. Gadatsch's book is now considered the current classic, THE authoritative standard work on IT-supported design of business processes. The tenth edition has been revised and adapted to the requirements of the digital transformation. Process management has evolved greatly due to the trend of digitalisation and as a result of the pandemic. Another related trend is the increased use of Data Science methods for process management, which has been consequently named Process Science at scientific conferences. Recent research results published under the heading of Explorative Process Management are also of particular importance. They show that the first main phase of process management was rather focused on optimising existing processes and business models. New practical examples were included at various points in the book, for example the migration strategies for the ERP system SAP S/4 HANA, which is the basis for many industrial and service processes. The chapter on modelling processes was updated and newer methods such as Business Model Canvas were included.

Legal Strategies Antoine Masson, Mary J. Shariff, 2009-12-12 Far from regarding the law as supreme, corporations approach law as an element of executive thought and action aimed at optimizing competitiveness. The objective of this book is to identify, explore and define corporate legal strategies that seek advantage in the opportunities revealed when the Law is perceived as a resource to be mobilized and aligned with the firm's business and economic agendas.

Multiple Approaches to Intelligent Systems Ibrahim F. Imam, Yves Kodratoff, Ayman El-Dessouki, Moonis Ali, 2004-05-19 We never create anything, We discover and reproduce. The Twelfth International Conference on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems has a distinguished theme. It is concerned with bridging the gap between the academic and the industrial worlds of Artificial Intelligence (AI) and Expert Systems. The academic world is mainly concerned with discovering new algorithms, approaches, and methodologies; however, the industrial world is mainly driven by profits, and concerned with producing new products or solving customers' problems. Ten years ago, the artificial intelligence research gap between academia and industry was very broad. Recently, this gap has been narrowed by the emergence of new fields and new joint research strategies in academia. Among the new fields which contributed to the academic-industrial convergence are knowledge representation, machine learning, searching, reasoning, distributed AI, neural networks, data mining, intelligent agents, robotics, pattern recognition, vision, applications of expert systems, and others. It is worth noting that the end results of research in these fields are usually products rather than empirical analyses and theoretical proofs. Applications of such technologies have found great success in many domains including fraud detection, internet service, banking, credit risk and assessment, telecommunication, etc. Progress in these areas has encouraged the leading corporations to institute research funding programs for academic institutes. Others have their own research laboratories, some of which produce state of the art research.
