A History of the Photographic Lens Rudolf Kingslake, 1989-11-22 The lens is generally the most expensive and least understood part of any camera. In this book, Rudolf Kingslake traces the historical development of the various types of lenses from Daguerre's invention of photography in 1839 through lenses commonly used today. From an early lens still being manufactured for use in low-cost cameras to designs made possible through such innovations as lens coating, rare-earth glasses, and computer aided lens design and testing, the author details each major advance in design and fabrication. The book explains how and why each new lens type was developed, and why most of them have since been abandoned. This authoritative history of lens technology also includes brief biographies of several outstanding lens designers and manufacturers of the past.

Stepping Up to the Sony Alpha NEX-3N Robert Vincent, 2013-10-18 Are you the type of person that likes to dive into something head-first? Getting out there and actually taking pictures is the best way to master photography. But how many failed photos will you take along the way? Covering only the essentials, and how they are applied to the NEX, this crash course will get you out there shooting quality photos without bogging you down in unnecessary details. The NEX-3N is Sony's effort to court the point and shoot crowd. A large sensor coaxed into a small body was the basis for the NEX line, but the

3N takes it to a new level by incorporating the new collapsible zoom lens as well as a dedicated zoom lever. Finally with these two features the 3N is closer to a point and shoot camera in body and design but approaching a professional DSLR in picture quality. If you're a beginner moving up from a point and shoot or even a cell phone and taking a step out of your comfort zone, then this book can be the safety net you need to ensure you get the shots and not the flops.

The Blind Photographer Julian Rothenstein, 2016-09-06 The blind photographer cannot see a butterfly perched perfectly still on a flower, a bowl of sweet-smelling fruit, or a child's rattle on a darkened floor, but the mind's eye is sharply focused. How then, do blind or partially sighted people capture such extraordinary images? The photographs in this revelatory book suggest a deeper truth: that blindness is itself a kind of seeing, and that those who can see are often blind to the strangeness and beauty of the world around them. As the blind photographer Evgen Bavcar writes, Photography must belong to the blind, who in their daily existence have learned to become the masters of camera obscura. Through the photographs of more than fifty blind or partially sighted people from around the world, this exhilarating book—the first to explore this phenomenon in all its vibrancy and diversity—will make you see differently.
