**Bugs Up Close** ,2014-11-25 Bugs are usually so small that we hardly notice them, let alone think of them as living beings. But call upon the magnifying glass, and a shapeless jumble of legs, wings, and antennae suddenly start staring back at us. About 80 percent of the Earth's animals are insects. While there are millions of different species, we rarely see many of them . . . until now. Thanks to the photography of John Hallmén, who took a camera and magnified these magnificent creatures one hundred times, we can see what we've never been able to see before. Bugs Up Close takes readers on a journey into a world rarely seen, with incredible photographs of such insects as: Crane flies Yellow meadow ants Black fungus beetles Treehoppers And many more! The diversity of this insect civilization is striking and unknown to most. An insect we may never have thought twice about now looks like a creature from outer space. Fascinating and somewhat monstrous details such as compound eyes, antennae, and sharp mouth parts are visible, and with text by Lars-Åke Janzon, Bugs Up Close is an amazing close look into the strange and beautiful world of insects.

Bugs bite, drink blood, and eat food in our fields and gardens. Is bugging a crime? Decide for yourself! Read rap sheets on the major categories of insects, and marvel at photomicrographs that magnify bug parts by 10 to 300,000 times!
