An Analysis of Daniel Kahneman's Thinking, Fast and Slow Jacqueline Allan, 2018-02-21 *Thinking, Fast and Slow* by Daniel Kahneman offers a general audience access to over six decades of insight and expertise from a Nobel Laureate in an accessible and interesting way. Kahneman's work focuses largely on the problem of how we think, and warns of the dangers of trusting to intuition – which springs from “fast” but broad and emotional thinking – rather than engaging in the slower, harder, but surer thinking that stems from logical, deliberate decision-making. Written in a lively style that engages readers in the experiments for which Kahneman won the Nobel, *Thinking, Fast and Slow*'s real triumph is to force us to think about our own thinking.

Summary Of "Thinking, Fast And Slow - By Daniel Kahneman" Sapiens Editorial, 2017-10-06 DESCRIPTION OF THE ORIGINAL BOOK. *Thinking, fast and slow* is a book in which we're presented with a synthesis of studies carried out by the author, Daniel Kahneman. Daniel won a Economics Nobel Prize award. The main topic of the book is the way humans think, which influences our daily lives. The work presents the dichotomy between two ways of thinking, which the author calls 'systems'. The first system is fast, instinctive and emotional, the second one is slow, more rational and logical. Each of these entails cognitive and behavioural characteristics. From a highly original and logical hypothesis, a vision is presented which shapes the routine of decision-making that people make in their daily lives. This book is recommended for professionals in the psychology field. As well as for anyone interested in knowing themselves better and the processes involved in their decisions, with the means to acquire tools which allow them to reach the path leading to their happiness.

Quicklet on Daniel Kahneman's *Thinking, Fast and Slow* (CliffsNotes-like Summary, Analysis, and Commentary) Adam McKibbin, 2012-03-02 ABOUT THE BOOK While experts have roundly debunked the popular notion that we feeble humans only utilize 10 percent of our brains, most of us still find ourselves secretly believing (or wishing) that there is uncharted territory upstairs to explore. As we get older, our brains – well, I don't want to speak for you, so I'll say my brain – increasingly fills with useless detritus; I will thus forget to buy a necessary item at the store, but will be able to sing along lyric-for-lyric with some old Def Leppard song during the drive home. Self-help books that promise to unlock your secret brainpower will mostly peddle you the same old platitudes. Where to turn when you want to take a serious tour through your own thought process? Daniel Kahneman's *Thinking, Fast and Slow* hit the bulls-eye for me. While not a self-help book by any traditional definition, Kahneman's work offers actionable insights about decision-making and gut reactions that did indeed help me to help myself. By breaking the brain into two separate – and sometimes competing – components (“System 1” and “System 2”), the author helps the reader recognize some very common pratfalls. MEET THE AUTHOR Adam McKibbin's work has appeared in a wide variety of magazines and websites, including *The Nation*, the *Chicago Tribune*, *AlterNet*, *Paste* and *Punk Planet*. He studied creative writing at the University of Wisconsin and received the Award for Academic Excellence for his collected fiction. Adam lives in Los Angeles with his wife and daughter, and can be found on Twitter at @TheRedAlert. EXCERPT FROM THE BOOK In one example, the reader is asked to picture a passenger on the New York subway reading the *Times*, and to guess whether the person has a PhD or didn't go to college at all. The common gut reaction is to pick the PhD, even though there are far fewer PhDs on the subway at a given time than passengers without college degrees. Not just taking a situation at its face value, even statistically speaking, runs counter to how System 1 is programmed to operate. Kahneman sprinkles some academic autobiography through the book as well. Part 2 includes a section on what he calls “the best-known and most controversial” of his experiments with Amos Tversky: a

seemingly simple question about a young woman named Linda. Linda is introduced to the crowd as a young woman who majored in philosophy and kept active with various social causes. Kahneman's audience then had to choose the most likely outcome for Linda. Was she a bank teller or a bank teller who was active in the feminist movement? Although the former is the smarter choice, an overwhelming number of undergraduates chose the latter due to the associations they were making about "Linda." Even renowned scientist Stephen Jay Gould fell into the trap... Buy a copy to keep reading!

Summary - Thinking, Fast and Slow: Instant-Summary,2017-12-25 Thinking, Fast and Slow - A Complete and Detailed Summary! The first chapter begins with Daniel Kahneman's description of two main characters of the book, neither of which are people. He refers to something that he calls System 1 and System 2. System 1 is dedicated to thinking fast. It almost solely relies on intuition and almost entirely disregards information. System 1 is in control every time we do an activity that requires quick thinking and reactions. For example, System 1 is in control when we drive, when we want to read other people's facial expressions, when we answer to questions that require quick answers, etc. Kahneman states that System 1 is involuntary

and operates entirely on its own. System 2 thinks slowly and always relies on information and almost never on intuition. System 2 is in control when we try to solve difficult math problem, when we want to focus our attention on the voice of person in a room full of people, when we fill in tax forms, or during any other events that are based on awareness. System 2 requires energy, because it operates voluntarily. Thinking, Fast and Slow by Daniel Kahneman - A 30-minute Summary Inside this Instaread Summary: • Overview of the entire book • Introduction to the important people in the book • Summary and analysis of all the chapters in the book • Key Takeaways of the book • A Reader's Perspective Preview of this summary: Introduction In this book Daniel Kahneman hopes to identify and understand errors of judgment and choice. He wants to provide a richer and more accurate vocabulary to discuss these errors. He worked with his colleague, Amos Tversky, doing research on intuitive statistics. The two of them had already concluded in an earlier seminar that their own intuitions were lacking. Their subjective judgments were biased, they were too willing to believe research findings based on inadequate evidence, and they collected too few observations in their own research. The goal of their study was to find out whether other researchers had this problem as well. Kahneman and Tversky found that participants in their studies ignored the relevant statistical facts and relied exclusively on resemblance. They used resemblance as a heuristic (rule of thumb) to simplify things when making a difficult judgment. Relying on this heuristic caused predictable biases (systematic errors) in their predictions. The research partners learned that people tend to determine the importance of issues by how easy they are retrieved from their memory. This is brought about in large part by the extent of coverage of the issues in the media. Kahneman presents a view of how the mind works, drawing on recent developments in cognitive and social psychology. He explains the differences between fast (intuitive) thinking and slow (deliberate) thinking. People have a limitation in their minds: an excessive confidence in what they think they know...

SUMMARY - Thinking, Fast And Slow By Daniel Kahneman Shortcut Edition,2021-05-31 * Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. *As you read this summary, you will learn what the author understood from the many experiences he had with the way we think and make decisions. He carried out these experiments with the help of psychologists and economists. *You will also discover : that the result of these analyses has made it possible to determine two systems of thought; that intuition and reflection are two separate functions; that very often we act without thinking and that the decisions we make without thinking are not necessarily bad; that the optimism inherent in human nature leads us towards capitalism; that decision-making involves both systems of thought. *The purpose of this book is to distinguish between intuition and reflection, the two speeds of thought that Daniel Kahneman calls System 1 (intuition) and System 2 (reflection). *Without going so far as to say that Man has two brains, he details, with the help of his experiences, the capital differences of these two ways of thinking and shows that these two systems can sometimes be in competition but also prove to be complementary. Daniel Kahneman specifies that most of his research was done with Amos Tversky, an Israeli psychologist who has since passed away. *Other psychologists call this Fast Thinking (intuition) and Slow Thinking (reflection) but the author prefers to call the two systems because their processes are very different. It is these two systems that will be analyzed in this book. His experiments do not necessarily follow a logic of sequence and do not necessarily have links between them. *Buy now the summary of this book for the modest price of a cup of coffee!
