**Dark Matter and the Dinosaurs** Lisa Randall,2015-10-27 In this brilliant exploration of our cosmic environment, the renowned particle physicist and New York Times bestselling author of *Warped Passages* and *Knocking on Heaven's Door* uses her research into dark matter to illuminate the startling connections between the furthest reaches of space and life here on Earth. Sixty-six million years ago, an object the size of a city descended from space to crash into Earth, creating a devastating cataclysm that killed off the dinosaurs, along with three-quarters of the other species on the planet. What was its origin? In *Dark Matter and the Dinosaurs*, Lisa Randall proposes it was a comet that was dislodged from its orbit as the Solar System passed through a disk of dark matter embedded in the Milky Way. In a sense, it might have been dark matter that killed the dinosaurs. Working through the background and consequences of this proposal, Randall shares with us the latest findings—established and speculative—regarding the nature and role of dark matter and the origin of the Universe, our galaxy, our Solar System, and life, along with the process by which scientists explore new concepts. In *Dark Matter and the Dinosaurs*, Randall tells a breathtaking story that weaves together the cosmos' history and our own, illuminating the deep relationships that are critical to our world and the astonishing beauty inherent in the most familiar things.

**Warped Passages** Lisa Randall,2009-11-10 The universe has many secrets. It may hide additional dimensions of space other than the familiar three we recognize. There might even be another universe adjacent to ours, invisible and unattainable . . . for now. *Warped Passages* is a brilliantly readable and altogether exhilarating journey that tracks the arc of discovery from early twentieth-century physics to the razor's edge of modern scientific theory. One of the world's leading theoretical physicists, Lisa Randall provides astonishing scientific possibilities that, until recently, were restricted to the realm of science fiction. Unraveling the twisted threads of the most current debates on relativity, quantum mechanics, and gravity, she explores some of the most fundamental questions posed by Nature—taking us into the warped, hidden dimensions underpinning the universe we live in, demystifying the science of the myriad worlds that may exist just beyond our own.

**Knocking on Heaven's Door** Lisa Randall,2011-09-20 "Science has a battle for hearts and minds on its hands....How good it feels to have Lisa Randall's unusual blend of top flight science, clarity, and charm on our side." —Richard Dawkins "Dazzling ideas....Read this book today to understand the science of tomorrow." —Steven Pinker The bestselling author of *Warped Passages*, one of Time magazine's "100 Most Influential People in the World," and one of Esquire's "75 Most Influential People of the 21st Century," Lisa Randall gives us an exhilarating overview of the latest ideas in physics and offers a rousing defense of the role of science in our lives. Featuring fascinating insights into our scientific future born from the author's provocative conversations with Nate Silver, David Chang, and Scott Derrickson, *Knocking on Heaven's Door* is eminently readable, one of the most important popular science books of this or any year. It is a necessary volume for all who admire the work of Stephen Hawking, Michio Kaku, Brian Greene, Simon Singh, and Carl Sagan; for anyone curious about the workings and aims of the Large Hadron Collider, the biggest and most expensive machine ever built by mankind; for those who firmly believe in the importance of science and rational thought; and for anyone interested in how the Universe began...and how it might ultimately end.

**Mapping the Heavens** Priyamvada Natarajan,2016-04-28 A theoretical astrophysicist explores the ideas that transformed our knowledge of the universe over the past century. The cosmos, once understood as a stagnant place, filled with the ordinary, is now a universe that is expanding at an accelerating pace, propelled by dark energy and structured by dark matter. Priyamvada Natarajan, our guide to these ideas, is someone at the forefront of the research—an astrophysicist who literally creates maps of invisible matter in the universe. She not only explains for a wide audience the science behind these essential ideas but also provides an understanding of how radical scientific theories gain acceptance. The formation and growth of black holes, dark matter halos, the accelerating expansion of the universe, the echo of the big bang, the discovery of exoplanets, and the possibility of other universes—these are some of the puzzling cosmological topics of the early twenty-first century. Natarajan discusses why the acceptance of new ideas about the universe and our place in it has never been linear and always contested even within the scientific community. And she affirms that, shifting and incomplete as science always must be, it offers the best path we have toward making sense of our wondrous, mysterious universe. "Part history, part science, all illuminating. If you want to understand the greatest ideas that shaped our current cosmic cartography, read this book."—Adam G. Riess, Nobel Laureate in Physics, 2011 "A highly readable, insider's view of recent discoveries in astronomy with unusual attention to the instruments used and the human drama of the scientists."—Alan Lightman, author of *The Accidental Universe* and *Einstein's Dream*

**Why Dinosaurs Matter** Kenneth Lacovara,2017-09-19 What can long-dead dinosaurs teach us about our future? Plenty, according to paleontologist Kenneth Lacovara, who has discovered some of the largest creatures to ever walk the Earth. By tapping into the ubiquitous wonder that dinosaurs inspire, Lacovara weaves together the stories of our geological awakening, of humanity's epic struggle to understand the nature of

deep time, the meaning of fossils, and our own place on the vast and bountiful tree of life. Go on a journey--back to when dinosaurs ruled the Earth--to discover how dinosaurs achieved feats unparalleled by any other group of animals. Learn the secrets of how paleontologists find fossils, and explore quirky, but profound questions, such as: Is a penguin a dinosaur? And, how are the tiny arms of T. rex the key to its power and ferocity? In this revealing book, Lacovara offers the latest ideas about the shocking and calamitous death of the dinosaurs and ties their vulnerabilities to our own. Why *Dinosaurs Matter* is compelling and engaging—a great reminder that our place on this planet is both precarious and potentially fleeting. “As we move into an uncertain environmental future, it has never been more important to understand the past.”

**Dinosaurs Before Dark** Mary Pope Osborne, 2012 Eight-year-old Jack and his younger sister Annie find a magic treehouse, which whisks them back to an ancient time zone where they see live dinosaurs.

**The Dark Matter of Mona Starr** Laura Lee Gulledge, 2020-04-07 A bold and original YA graphic novel about one teen’s battle to understand her mental illness—and find her creative genius Sometimes, the world is too much for Mona Starr. She’s sweet, geeky, and creative, but it’s hard for her to make friends and connect with other people, and her depression seems to take on a vivid, concrete form. She calls it her Matter. The Matter seems to be everywhere, telling Mona she’s not good enough and that everyone around her wishes she’d go away. But with therapy, art, writing, and the persistence of a few good friends, Mona starts to understand her Matter and how she can turn her fears into strengths. Heartfelt, emotionally vulnerable, and visually stunning, *The Dark Matter of Mona Starr* is a story about battling your inner doubts and fears—and finding your creative genius.

**Dark Matter and Dark Energy** Brian Clegg, 2019-08-08 'Clear and compact ... It's hard to fault as a brief, easily digestible introduction to some of the biggest questions in the Universe' Giles Sparrow, BBC Four's *The Sky at Night*, Best astronomy and space books of 2019: 5/5 All the matter and light we can see in the universe makes up a trivial 5 per cent of everything. The rest is hidden. This could be the biggest puzzle that science has ever faced. Since the 1970s, astronomers have been aware that galaxies have far too little matter in them to account for the way they spin around: they should fly apart, but something concealed holds them together. That 'something' is dark matter - invisible material in five times the quantity of the familiar stuff of stars and planets. By the 1990s we also knew that the expansion of the universe was accelerating. Something, named dark energy, is pushing it to expand faster and faster. Across the universe, this requires enough energy that the equivalent mass would be nearly fourteen times greater than all the visible material in existence. Brian Clegg explains this major conundrum in modern science and looks at how scientists are beginning to find solutions to it.

**Defending Planet Earth** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee to Review Near-Earth-Object Surveys and Hazard Mitigation Strategies, 2010-07-21 The United States spends approximately \$4 million each year searching for near-Earth objects (NEOs). The objective is to detect those that may collide with Earth. The majority of this funding supports the operation of several observatories that scan the sky searching for NEOs. This, however, is insufficient in detecting the majority of NEOs that may present a tangible threat to humanity. A significantly smaller amount of funding supports ways to protect the Earth from such a potential collision or mitigation. In 2005, a Congressional mandate called for NASA to detect 90 percent of NEOs with diameters of 140 meters or greater by 2020. *Defending Planet Earth: Near-Earth Object Surveys and Hazard Mitigation Strategies* identifies the need for detection of objects as small as 30 to 50 meters as these can be highly destructive. The book explores four main types of mitigation including civil defense, slow push or pull methods, kinetic impactors and nuclear explosions. It also asserts that responding effectively to hazards posed by NEOs requires national and international cooperation. *Defending Planet Earth: Near-Earth Object Surveys and Hazard Mitigation Strategies* is a useful guide for scientists, astronomers, policy makers and engineers.

**The Dinosaur Lords** Victor Milán, 2015-07-28 A world made by the Eight Creators on which to play out their games of passion and power, Paradise is a sprawling, diverse, often brutal place. Men and women live on Paradise as do dogs, cats, ferrets, goats, and horses. But dinosaurs predominate: wildlife, monsters, beasts of burden--and of war--Amazon.com.

**The Doctor and the Dinosaurs** Mike Resnick, 2013-12-10 Welcome to a Steampunk wild west starring Doc Holliday, with zombies, dinosaurs, robots, and cowboys. The time is April, 1885. Doc Holliday lies in bed in a sanitarium in Leadville, Colorado, expecting never to leave his room again. But the medicine man and great chief Geronimo needs him for one last adventure. Renegade Comanche medicine men object to the newly-signed treaty with Theodore Roosevelt. They are venting their displeasure on two white men who are desecrating tribal territory in Wyoming. Geronimo must protect the men or renege on his agreement with Roosevelt. He offers Doc one year of restored health in exchange for taking on this mission. Welcome to the birth of American paleontology, spearheaded by two brilliant men, Edward Drinker Cope and Othniel Charles Marsh, two men whose genius is only exceeded by their hatred for each other's guts. Now, with the aid of Theodore Roosevelt, Cole Younger, and Buffalo Bill Cody, Doc Holliday must save Cope and Marsh not only from the Comanches, not only from living, breathing dinosaurs, but from each other. And that won't be easy.

**Day the Universe Changed** James Burke, 2009-11-29 *The Day the Universe Changed* presents a sweeping view of the history of science, technology, and human civilization and examines the moments in history when a change in knowledge radically altered man's understanding of himself and the world around him. James Burke examines eight periods in history when our view of the world shifted dramatically: In the eleventh century, when extraordinary discoveries were made by Spanish crusaders. In fourteenth-century Florence, where perspective in painting emerged. In the fifteenth century, when the advent of the printing press shook the foundations of an oral society. In the sixteenth century, when gunnery developments triggered the birth of modern science. In the early eighteenth century, when hot English summers brought on the Industrial Revolution. In the battlefield surgery stations of the French revolutionary armies, where people first became statistics. In the nineteenth century, when the discovery of dinosaur fossils led to the theory of evolution. In the 1820s, when electrical experiments heralded the end of scientific certainty. Based on the popular television documentary series, *The Day the Universe Changed* is a bestselling history that challenges the reader to decide whether there is absolute knowledge to discover—or whether the universe is ultimately what we say it is.

**Cataclysms** Michael R. Rampino, 2017-08-22 In 1980, the science world was stunned when a maverick team of researchers proposed that a massive meteor strike had wiped the dinosaurs and other fauna from the Earth 66 million years ago. Scientists found evidence for this theory in a “crater of doom” on the Yucatán Peninsula, showing that our planet had once been a target in a galactic shooting gallery. In *Cataclysms*, Michael R. Rampino builds on the latest findings from leading geoscientists to take “neocatastrophism” a step further, toward a richer understanding of the science behind major planetary upheavals and extinction events. Rampino recounts his conversion to the impact hypothesis, describing his visits to meteor-strike sites and his review of the existing geological record. The new geology he outlines explicitly rejects nineteenth-century “uniformitarianism,” which casts planetary change as gradual and driven by processes we can see at work today. Rampino offers a cosmic context for Earth’s geologic evolution, in which cataclysms from above in the form of comet and asteroid impacts and from below in the form of huge

outpourings of lava in flood-basalt eruptions have led to severe and even catastrophic changes to the Earth's surface. This new geology sees Earth's position in our solar system and galaxy as the keys to understanding our planet's geology and history of life. Rampino concludes with a controversial consideration of dark matter's potential as a triggering mechanism, exploring its role in heating Earth's core and spurring massive volcanism throughout geologic time.
