Core Concepts in Athletic Training and Therapy Susan Kay Hillman, 2012-01-31 Core Concepts in Athletic Training and Therapy provides a balanced introduction to the knowledge, skills, and clinical abilities that span the profession of athletic training. Students in athletic training, coaching, or other health care fields will find current information covering the breadth of theory and application of athletic training, including evidence-based practice, prevention and health promotion, clinical examination and diagnosis, acute and emergency care, therapeutic interventions, and health care administration. It also presents advanced topics of pathophysiology and psychological response to sport injury to better prepare students for continued study. Compared to other introductory athletic training texts, Core Concepts in Athletic Training and Therapy is the only text that aligns with the newest athletic training education competencies from the National Athletic Trainers' Association (2011). Written by a team of respected athletic training educators with experience at the professional and collegiate levels, the text breaks new ground by condensing key concepts to a comprehensive level while not overwhelming students with content that will be addressed in depth in advanced courses. Numerous features assist students in learning the fundamentals:

- Each of the six parts opens with a discussion of the competencies that are covered in that part and concludes with a reference list of those competencies by description and number, making it easy to monitor the knowledge required.
- A companion web resource contains 41 clinical proficiency exercises, carefully chosen to complement the introductory level of the text and align with required educational objectives. The modules may be completed online or printed, and cross-references at the end of each chapter guide students to the appropriate modules to apply the chapter content.
- Case studies sprinkled throughout the text demonstrate real-world situations and include critical thinking questions that underscore principles of rehabilitation and exercise.
- Full-color photographs depict specific conditions and techniques, giving students an accurate picture of real practice.
- For instructors, a complete set of ancillaries assists in preparing and presenting lectures, leading class discussion, and planning assignments and assessments. In addition, Core Concepts in Athletic Training and Therapy is the first text to offer a complete chapter on evidence-based practice, the newest educational competency required of entry-level athletic trainers by the NATA. The rest of the text introduces general information about life as an athletic trainer, such as training, education, licensure, certification, employment opportunities, and the roles in a sports medicine team. The core of the text then focuses on required knowledge and skills related to injury prevention, injury recognition and classification (including region-specific examination strategies, basic objective tests, physical exam strategies, and injury mechanisms), acute care, therapeutic interventions, and the role of pharmaceuticals in the healing process. To round out the text, it addresses health care administration and discusses strategies for the management of athletic training programs. With learning features and a web resource that integrate clinical learning into an introductory course, Core Concepts in Athletic Training and Therapy is the essential resource for current and future athletic trainers. Long after its first use, it will prove a valuable reference for athletic training students as they progress through the curriculum, prepare for certification, and begin careers in the profession. Core Concepts in Athletic Training and Therapy is part of Human Kinetics' Athletic Training Education Series. Featuring the work of respected authorities in athletic training, this collection of outstanding textbooks, each with its own supporting instructional resources, parallels and expounds on the content areas in the accreditation standards of the NATA Education Council.

POGIL Shawn R. Simonson, 2023-07-03 Process Oriented Guided Inquiry Learning (POGIL) is a pedagogy that is based on research on how people learn and has been shown to lead to better student outcomes in many contexts and in a variety of academic disciplines. Beyond facilitating students' mastery of a discipline, it promotes vital educational outcomes such as communication skills and critical thinking. Its active international community of practitioners provides accessible educational development and support for anyone developing related courses. Having started as a process developed by a group of chemistry professors focused on helping their students better grasp the concepts of general chemistry, The POGIL Project has grown into a dynamic organization of committed instructors who help each other transform classrooms and improve student success, develop curricular materials to assist this process, conduct research expanding what is known about learning and teaching, and provide professional development and collegiality from elementary teachers to college professors. As a pedagogy it has been shown to be effective in a variety of content

areas and at different educational levels. This is an introduction to the process and the community. Every POGIL classroom is different and is a reflection of the uniqueness of the particular context – the institution, department, physical space, student body, and instructor – but follows a common structure in which students work cooperatively in self-managed small groups of three or four. The group work is focused on activities that are carefully designed and scaffolded to enable students to develop important concepts or to deepen and refine their understanding of those ideas or concepts for themselves, based entirely on data provided in class, not on prior reading of the textbook or other introduction to the topic. The learning environment is structured to support the development of process skills – such as teamwork, effective communication, information processing, problem solving, and critical thinking. The instructor’s role is to facilitate the development of student concepts and process skills, not to simply deliver content to the students. The first part of this book introduces the theoretical and philosophical foundations of POGIL pedagogy and summarizes the literature demonstrating its efficacy. The second part of the book focusses on implementing POGIL, covering the formation and effective management of student teams, offering guidance on the selection and writing of POGIL activities, as well as on facilitation, teaching large classes, and assessment. The book concludes with examples of implementation in STEM and non-STEM disciplines as well as guidance on how to get started. Appendices provide additional resources and information about The POGIL Project.
