Jump in and dive! Dive! Dive! Scuba diving is an activity that most people are interested in and curious about; however, only 1.1 percent of Americans are actually certified divers. When it comes to diving, there are three kinds of people, those that don't try because they are too afraid and fear they won't be able to do it, those that get certified but only dive once or twice, and those that fall in love. The reason why most people are afraid of the water is that so much of it

has yet to be thoroughly investigated. The globe is covered in 70% water, and only 10% has been explored. That leaves a lot of territory unknown to the human eye. The purpose of this guide is to provide you with tips on getting certified, finding gear, diving trips, and much more! Think you have what it takes? Influx Daniel Suarez, 2015-02-03 New York Times bestselling author Daniel Suarez imagines a chilling future where technological advances are held hostage by the government in this thriller that perfectly blends “nail-biting suspense with accessible science” (Publishers Weekly). Physicist Jon Grady and his team have discovered a device that can reflect gravity—a triumph that will revolutionize the field of physics and change the future. But instead of acclaim, Grady’s lab is locked down by a covert organization known as the Bureau of Technology Control. The bureau’s mission: suppress the truth of sudden technological progress and prevent the social upheaval it would trigger. Because the future is already here. And it’s rewards are only for a select few. When Grady refuses to join the BTC,

he's thrown into a nightmarish high-tech prison housing other doomed rebel intellects. Now, as the only hope to usher humanity out of its artificial dark age, Grady and his fellow prisoners must try to expose the secrets of an unimaginable enemy—one that wields a technological advantage half a century in the making.

Underwater Optics Seibert Q Duntley, 1966 The irradiance pattern was measured for the propagation of a collimated beam of light underwater. A neodymium-doubled green laser was transmitted horizontally at a six foot depth in Lake Winnepesaukee, N.H. The irradiance was measured at distances from 0 to 100 feet and for off-axis angles from 0 to 58 degrees. The water had an attenuation length of 4.54 ft/ln and an absorption coefficient of 0.0446 ln/ft. The ratio of attenuation coefficient to absorption coefficient was 4.94. The fractional power contained within a cone of various angles was computed. At 20 attenuation lengths only 10% of the total power is contained within a cone of 4 degrees whereas at 4 attenuation lengths this same cone contains 50% of the power. (Author).
