### The Twin Sister Planets Venus and Earth Robert J.

Malcuit,2014-11-25 This book explains how it came to be that Venus and Earth, while very similar in chemical composition, zonation, size and heliocentric distance from the Sun, are very different in surface environmental conditions. It is argued here that these differences can be accounted for by planetoid capture processes and the subsequent evolution of the planet-satellite system. Venus captured a one-half moon-mass planetoid early in its history in the retrograde direction and underwent its “fatal attraction scenario” with its satellite (Adonis). Earth, on the other hand, captured a moon-mass planetoid (Luna) early in its history in prograde orbit and underwent a benign estrangement scenario with its captured satellite.

**Twin Planets** Philip E. High, 1967 Earth and Firma were mirror worlds. Because they were on a single time-track, Earth was destined to repeat the dangerous history of Firma--which had been stopped in its rotation around the sun by Aliens. Denning and Liston were twin humans, biogenetic supermen with a single mission: to get Firma moving on its axis again and destroy its Alien conquerors. Though Firma was Liston's universe, Denning had to

aid him, or Earth, too, would one day be burned to a cinder by the heat of the sun.

*The Tale of the Twin Planets* Janna L. Ruck, 2018-10-10

Professor Nicholas claims to be a man of science, but that might change after he and his wife take their five adopted children (A.J., Adam, Rachel, Allison and Cinnamon) on a trip into outer-space. The space traveler's journey takes them to two distant planets. One of the planets is yellow and the other one looks much like Earth. The five children and Mrs. Nicholas can't explain it, but they feel strangely drawn to the yellow planet. To their amazement the yellow planet draws their ship the Star Clipper towards it. After landing on that yellow planet, the Professor, his wife and children are soon caught up in an adventure. Part of this adventure takes place on the yellow planet which they learn is named Willow Weath. The other part of their adventure leads them to the earth-like planet. It is known as Tellus. Both planets are involved in a crisis. Nomis, the Head Servant on Willow Weath, is the one who sends the visitors and three helpers (Brandon, Anissa and Ann) to Tellus. While the adventurers are there, they find out just how serious the situation is. During their time on Tellus the travelers outrun the agents of the evil Queen Ragnus onboard the submarine

Dawn Star. The Nicholas' then return to Willow Weath where they and the three helpers set out on a quest. Along the way they learn how the Trio: Sum, Crio and The Rider on the Clouds are always with them. However, as the family proceeds down the trail a foul being known as Mr. Furis tries his best to convince them otherwise. While on Willow Weath the adventurers stay in a tree castle. They also travel through an enchanted forest, a quarrelsome village, a dreary desert, a dark terrifying valley, fight a fierce battle, and climb a lofty peak. Along the path, the earthlings meet many people and learn many lessons. Are they the fulfillment of The Prophecy of The Seven, will they be successful in delivering the Mourning Stone to its proper home?

Mirror Earth Michael D. Lemonick, 2012-10-16 In the mid-1990s, astronomers made history when they began to find planets orbiting stars in the Milky Way. More than eight hundred planets have been found since then, yet none of them is anything like Earth and none could support life. Now, armed with more powerful technology, planet hunters are racing to find a true twin of Earth. Science writer Michael Lemonick has unique access to these exoplaneteers, as they call themselves, and Mirror Earth unveils their passionate quest. Unlike competitors in other races,

Geoff Marcy, Bill Borucki, David Charbonneau, Sara Seager, and others actually consult and cooperate with one another. But only one will be the first to find Earth's twin. *Mirror Earth* tells the story of their competition.

*The Search for Earth's Twin* Stuart G. Clark, 2016 In 1995 two Swiss astronomers discovered a planet circling a star other than our Sun. This changed our perception of the Universe forever, proving that Earth and the other celestial bodies in our Solar System are not alone in outer space. Now, after two decades of exploration, more than 860 planets have been discovered, many of which are completely unlike anything else we know. Some are blacker than coal; some are bathed in molten lava; others are perpetually scoured by hurricane-force winds; some have not one sun but two that rise in the morning, and others are perpetually drowned in global oceans. But as well as strange, uninhabitable lands, there is familiarity too. Some of these alien worlds are strikingly similar to planets in our Solar System. Astronomers now know of planets just like Jupiter, Neptune, Mars and Mercury orbiting stars similar to our Sun, both nearby and deep into space. Authoritatively written and fully up to date on this fast-moving area of science, *The Search for the Earth's Twin* will take you on a

journey through the cosmos via frozen wastelands, slow-moving globes and fiery volcanic bodies, to planets that can - and just might - sustain complex life. The prospect of discovering the Earth's twin is now tantalisingly close.

*Venus Revealed* David H. Grinspoon, 1997-01-05 Early robot probes sent by Russian and American scientists had given us some tantalizing but fragmentary glimpses of the surface and atmosphere, hinting at some of the most exotic conditions seen in the solar system. Magellan showed a planet full of beautiful landscapes, some eerily familiar and some completely unexpected - a world of active volcanoes, shining mountains, and even river valleys carved by torrents of flowing lava. Venus may once have had a wet, temperate, comfortable climate, much like Earth's. What happened to turn it into a hostile, burning, acid world? Our twin has important tales to tell us regarding several of Earth's most pressing environmental problems, including ozone destruction, global warming, and acid rain. In *Venus Revealed*, David Grinspoon makes a compelling case for comparative planetology as an important tool for gaining knowledge that is vital for our long-term survival on our own planet. He re-examines the uniqueness of our own Earth in light of the recent Magellan findings, while also raising

the provocative questions: Did a runaway greenhouse effect transform Venus into the burning oven she is today? By treating Venus as a controlled experiment, what can we learn from her that will help us survive on Earth? Grinspoon tackles these and other long-debated questions while explaining the incredible scientific advances made possible by the Magellan space probe.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. **Venus** Franklyn Mansfield Branley,1994 Describes the topography and motions of the planet Venus, explains theories about its origin and evolution, and presents recent discoveries made by the Magellan spacecraft.

**Secret History of Twin Planet Earth** Errol Hawkins,2007-05-30

**Planet Earth's Twin** Richard L. Barton,2003-10 This book is an overview of the history of planet earth from it's beginning, billions of years ago, through the end of the twentieth century AD, which includes four prior civilizations plus our present civilization. The book covers the major events that have happened throughout the many years that planet earth has resided in the universe, plus outlines the origin of all species that have or do inhabit planet earth and where they have gone or will go once they leave planet earth.

The book, also, outlines the many major events that have caused planet earth to evolve into the great planet that is known to it's inhabitancy today.

**Venus Revealed** David Harry Grinspoon,1998-04-10 Until very recently, all we really knew about Venus, our nearest planetary neighbor, was that it was roughly the same size and mass as the earth and was surrounded by a thick atmosphere. Then, in 1989, American scientists launched Magellan—the spacecraft that would revolutionize our vision of this mysterious planet. **Venus Revealed** is the first book to explain the breathtaking results of this mission, which unveiled a Venusian world of active volcanoes, shining mountains, and river valleys carved by torrents of flowing lava. At one time, Venus may have even had a wet, temperate climate, much like Earth's. What happened to turn it into a hostile, burning acid world? The answer could very well help us solve some of our most pressing environmental problems—from global warming to acid rain. In **Venus Revealed**, David Grinspoon eloquently argues that studying our exotic twin will inevitable teach us more about ourselves.

Double Planet John Gribbin,Marcus Chown,2012-11-30 The Dragon, an enormous comet, is on a trajectory that will bring it

perilously close to an Earth that is still suffering from the scars of a nuclear incident, and from the problems of the Greenhouse Effect. For the optimists - those that remain - it is a sign of change for the better; for others, the comet foreshadows humanity's final doom. But to Francis Reese and the hard-pressed astronauts of the depleted space programme, the Dragon presents a third outrageous, yet irresistible possibility - the transformation of a barren world into a new home for the beleaguered peoples of Earth.

**The SHADOW TWINS: Trouble on Stone Planet** Susannah Israel, 2019-02-20 This suspenseful story concerns the inhabitants of two binary planets, Blue and Stone, in the Merchant System of a far distant galaxy. The prologue introduces the dramatic formation of the two planets from an asteroid that crashes into the sun. Millennia later, bio-engineered humans settle and cultivate these remote, tandem worlds. The action starts when a shipment of crystals fails to arrive in-system at the Griebus Cluster spaceport. Two detectives, a fraternal twin team of sister and brother, are hired to go to the binary planets and investigate. They hear of mysterious disappearances, strange misdeeds, and find unlikely allies in their quest. Joining forces with telepathic animals, secret

mutants and a naïve young aristocrat from the Stellar House of the Suns, the twins dedicate themselves to saving the lives of their new friends. The story takes us on a biplanetary investigation that finds the twins on a fastline ship, racing against time to the InterPlanetary Council in a desperate attempt to rescue the miners on Stone Planet.

Coming soon - the most fantastic contest ever conceived: An airplane race pitting Amelia Earhart, Charles Lindbergh and Howard Hughes against Manfred von Richthofen (the Bloody Red Baron), his kid brother Lothar and Princess Irina Lvova of Russia! Which team will be the first to complete the never-before-attempted round-the-poles flight? Warning: On this doughnut-shaped alternate Earth it is impossible to fly off the edge!

**The Double Planet** Isaac Asimov, 1967

*Twin Planets* Philip E. High, 2011-09-29 Earth and Firma were twin planets - mirror worlds in a single time-track. Now Firma was

halted in its rotation around the sun by the Aliens. Unless Denning and Liston, twin humans, could destroy the Aliens and get Firma moving again, Earth would some day repeat Firma's tragedy and be burned to a cinder. The Aliens had an incredible array of weapons at their disposal. Denning and Liston had only their courage and their brains.

*Countersolar!* Richard A. Lupoff,2015-12-17 On the other side of the sun, opposite our earth, is a world we never see Counterearth. In every way it's identical to ours...almost! Albert Einstein, Juan (and Eva) Peron, Babe Didrickson and Sir Oswald Mosley are off on a wild race to Counterearth. It's all action and excitement against a historical background - in fact against two historical backgrounds - detailed enough to intrigue any history buff. It's January 1942; Cordell Hull is President of the United States; and the good guys take off in their spaceship, Manta, from the deck of the SS Titanic, steaming back from Liverpool to New York with thousands of New Year's revellers on board.

**Twin Planet - a Novel for a Global World Movement** Jeffrey Wachtel,2018-05-09 Millions of Earth-years ago in a distant twin galaxy to earth, in a twin solar system, on a non-identical extra-solar twin planet of our Earth, a supreme intelligent force surveyed

It's work. It judged the situation to be the right time in the planet's evolutionary timetable to create human beings. Set on a non-identical planet of Earth named Global World, DYLAN, a knowledge Communicator and Archeologist who feels out of synch with his culture and his workplace, makes a startling life-endsngeringdiscoverythe day before his annual vacation. Suddenly he is on the run from sinister forces within his own government. He connects with a nomadic tribe of people who will help him escape but, to do so, DYLAN must take a dangerous and forbidden journey across a great desert. What DYLAN learns during his journey changes his life's purpose from selfish motives to be happy, to a mission to help overcome the divisive forces that are hurtling Global World toward complete destruction.

**Lifespanners** M. P. Rogers, 2011-07-14 A story of greatness through severe trial and hope; of betrayal when hope is fulfilled - the interaction of twin planets, and the power of destiny prevailing still in the unknowable depths of the human psyche after fourteen hundred years from Earth. The story deals with twin planets. First Planet is toxic. A million people are housed there, comfortably, under a technologically perfect hemispheric Dome. They are quite brilliant but their lives are short. Immortals, living on Sister World, a paradise, provide for and reward them for their creativity in art and scientific inventions, treating them as a brain farm. After four hundred years two men escape from the Dome. They discover their origins by use of a marvelous instrument, a Vade Mecum, which belongs to Immortals and is illegal in their possession. The planet kills the men, but the Vade Mecum, by the numinous quality of its sensors, returns to the Dome with its recorded information. The daughter of one of the men writes a history from its revelation which challenges the Immortals to a crisis of decision they would do anything to avoid. The catalyst of all this is the Immortal

Seneschal, lone mediator of the peoples. He lives alone on First Planet in a beautiful Glass City, and oversees all providence for the Dome, which is carried out by robots. His senses are omnipresent, and he is aware of all vicissitudes of the Vade Mecum, but reveals nothing to his people on Sister World. He has a purpose of his own, unsuspected by either peoples, and reveals his abilities to no one - not even the woman he loves, the great Lifespanner musician, Felice, who leaves him because he will not grant her the prime award of immortality she so well deserves; nor does he explain himself. But their love is great and has its own effect. The result of this is irruption on both planets.

**Enjoying the Beat of Appearance: An Mental Symphony within Twin Planets Twin Planets**

In a world taken by screens and the ceaseless chatter of quick communication, the melodic elegance and psychological symphony

produced by the written word usually diminish into the back ground, eclipsed by the persistent sound and distractions that permeate our lives. But, set within the pages of *Twin Planets* a wonderful fictional prize overflowing with organic thoughts, lies an immersive symphony waiting to be embraced. Constructed by an elegant musician of language, this charming masterpiece conducts readers on a psychological trip, well unraveling the hidden songs and profound affect resonating within each carefully constructed phrase. Within the depths with this touching examination, we shall investigate the book is key harmonies, analyze its enthralling publishing style, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
