Digital Cinematography David Stump, ASC,2021-11-19 Today's successful cinematographer must be equal parts artist, technician, and business-person. The cinematographer needs to master the arts of lighting, composition, framing and other aesthetic considerations, as well as the technology of digital cameras, recorders, and workflows, and must know how to choose the right tools (within their budget) to get the job done. David Stump's Digital Cinematography focuses on the tools and technology of the trade, looking at how digital cameras work, the ramifications of choosing one camera versus another, and how those choices help creative cinematographers to tell a story. This book empowers the reader to correctly choose the appropriate camera and workflow for their project from today's incredibly varied options, as well as understand the ins and outs of implementing those options. Veteran ASC cinematographer David Stump has updated this edition with the latest technology for cameras, lenses, and recorders, as well as included a new section on future cinematographic trends. Ideal for advanced cinematography students as well as working professionals looking for a resource to stay on top of the latest trends, this book is a must read.

Microcomputers in Environmental Biology J.N.R. Jeffers,1992-02-15 At a time when green issues are at the forefront of public consciousness, appropriate methods for the handling of environmental data are especially important for research scientist. This book is intended as practical guide to the use of microcomputers in environmental biology, the study of living organisms in relation to their environment, their distribution in time and space, and their relationships with such factors as temperature, moisture and the chemical elements involved in nutrition and pollution. the ways in which microcomputers can be most usefully employed in the analysis of experiments and surveys, the analysis of multivariate data, radio-tagging and the analysis of animal movement and in modelling complex systems.

Foundations and Methods of Stochastic Simulation Barry Nelson,2013-01-31 This graduate-level text covers modeling, programming and analysis of simulation experiments and provides a rigorous treatment of the foundations of simulation and why it works. It introduces object-oriented programming for simulation, covers both the probabilistic and statistical basis for simulation in a rigorous but accessible manner (providing all necessary background material); and provides a modern treatment of experiment design and analysis that goes beyond classical statistics. The book emphasizes essential foundations throughout, rather than providing a compendium of algorithms and theorems and prepares the reader to use simulation in research as well as practice. The book is a rigorous, but concise treatment, emphasizing lasting principles but also providing specific training in modeling, programming and analysis. In addition to teaching readers how to do simulation, it also prepares them to use simulation in their research; no other book does this. An online solutions manual for end of chapter exercises is also be provided.

Intelligent Autonomous Systems 13 Emanuele Menegatti,Nathan Michael,Karsten Berns,Hiroaki Yamaguchi,2015-09-03 This book describes the latest research accomplishments, innovations, and visions in the field of robotics as presented at the 13th International Conference on Intelligent Autonomous Systems (IAS), held in Padua in July 2014, by leading researchers, engineers, and practitioners from across the world. The contents amply confirm that robots, machines, and systems are rapidly achieving intelligence and autonomy, mastering more and more capabilities such as mobility and manipulation, sensing and perception, reasoning, and decision making. A wide range of research results and applications are covered, and particular attention is paid to the emerging role of autonomous robots and intelligent systems in industrial production, which reflects their maturity and robustness. The contributions have been selected through a rigorous peer-review process and contain many exciting and visionary ideas that will further galvanize the research community, spurring novel research directions. The series of biennial IAS conferences commenced in 1986 and represents a premiere event in robotics.

The Big House Anthology: Diverse Plays for Diverse Casts David Watson,Andy Day,James Meteyard,2023-05-18 The Big House Anthology is a celebration of the last decade of work and plays by a unique theatre company, featuring five original plays that offer a chance for stories with diverse casts to contribute to the canon of theatre's literature. As a UK-based theatre company, The Big House empowers care leavers and other disadvantaged young people through performance and long-term support. Their plays are born from the hearts and minds of the young people they engage, with this anthology offering five very different plays: a runner struck down by MS; a rapper who spits and snarls and tries to find it in herself to forgive; a teenager who fights for wealth, status and respect in the underworld of county lines; a cackling cowboy they call Corona; and a dog that has been tracked, murdered and stuck in a stew. This anthology celebrates the explosive creativity that comes from mobilising and platforming diverse voices, and its importance in generating social change. Framed and introduced by directors and writers discussing their practice, along with an introduction by Jez Butterworth, this is a book for students, educators, artists, theatre-practitioners, social workers and storytellers to tell stories that are rarely told, let alone with such fierce authenticity.
