**Sigfried Giedion**

**Space, Time and Architecture** Sigfried Giedion, 1967 A classic first published in 1941, this is an unparalleled work on the shaping of our architectural environment. In his discussions of leading architects and styles, Giedion examines the evolving of new traditions; the strengthening of its plastic tendencies and conditions for further evolution; the urban renewal boom of the fifties; and the development of regionalism by creatively oriented architects.

Space, Time and Architecture Sigfried Giedion, 2009-02-28 This new edition ensures that the book will continue to be internationally acknowledged as the standard work on the development of modern architecture. -Walter Gropius A remarkable accomplishment. . . one of the most valuable reference books for students and professionals concerned with the reshaping of our environment. -José Luis Sert A milestone in modern thought, *Space, Time and Architecture* has been reissued many times since its first publication in 1941 and translated into half a dozen languages. In this revised edition of Sigfried Giedion's classic work, major sections have been added and there are 81 new illustrations. The chapters on leading contemporary architects have been greatly expanded. There is new material on the later development of Frank Lloyd Wright and the more recent buildings of Walter Gropius, particularly his American Embassy in Athens. In his discussion of Le Corbusier, Mr. Giedion provides detailed analyses of the Carpenter Center at Harvard University, Le Corbusier's only building in the United States, and his Priory of La Tourette near Lyons. There is a section on his relations with his clients and an assessment of his influence on contemporary architecture, including a description of the Le Corbusier Center in Zurich (designed just before his death), which houses his works of art. The chapters on Mies van der Rohe and Alvar Aalto have been brought up to date with examples of their buildings in the sixties. There is an entirely new chapter on the Danish architect

Jørn Utzon, whose work, as exemplified in his design for the Sydney Opera House, Mr. Giedion considers representative of post-World War II architectural concepts. A new essay, "Changing Notions of the City," traces the evolution of the structure of the city throughout history and examines current attempts to deal with urban growth, as shown in the work of such architects as José Luis Sert, Kenzo Tange, and Fumihiko Maki. Mr. Sert's Peabody Terrace is discussed as an example of the interlocking of the collective and individual spheres. Finally, the conclusion has been enlarged to include a survey of the limits of the organic in architecture.

*Befreites Wohnen* Sigfried Giedion, 2018 Sigfried Giedion's small, but vocal manifesto *Befreites Wohnen* (1929) is an early manifestation of modernist housing ideology and as such key to the broader understanding of the ambitions of the International Congresses of Modern Architecture (CIAM) and the debate on the industrialization of construction processes and its impact on public housing at the beginning of the twentieth century. An important step in Giedion's rise as one of the foremost propagators of modern architecture, this manifesto is based on the argumentative power of visual comparisons, and the only book the art historian both authored and designed. The German facsimile edition of Giedion's *Befreites Wohnen* is completed by an English translation and a scholarly essay that anchors the work in the context of its time and suggests the book's relevance for contemporary architectural discourse.--Site internet de l'éditeur.

*Building in France, Building in Iron, Building in Ferroconcrete* Sigfried Giedion, 1995-09-01 With *Building in France, Building in Iron, Building in Ferroconcrete* (1928)—published now for the first time in English—Sigfried

Giedion positioned himself as an eloquent advocate of modern architecture. This was the first book to exalt Le Corbusier as the artistic champion of the new movement. It also spelled out many of the tenets of Modernism that are now regarded as myths, among them the impoverishment of nineteenth-century architectural thinking and practice, the contrasting vigor of engineering innovations, and the notion of Modernism as technologically preordained.

**Giedion and America** Reto Geiser, 2018 Sigfried Giedion (1888-1968), one of the main protagonists of the architectural avant-garde in Europe, paradoxically achieved this reputation far from his homeland - in America. Nearly all of Giedion's books written after his initial stay at Harvard University were published in English long before they became available in his native German. Reto Geiser sheds new light on Giedion's life and reassesses his work through the lens of cultural transformation and modernization processes. The author questions the unbroken line of developments portrayed in the historiography of modern architecture, and argues that Giedion's position in between two cultural spheres not only caused ruptures and contradictions in his work but also productively shaped its reception on either side of the Atlantic.

**Architecture and the Phenomena of Transition** Sigfried Giedion, 2013-10-01

**The New Paradigm in Architecture** Charles Jencks, 2002-01-01 This book explores the broad issue of Postmodernism and tells the story of the movement that has changed the face of architecture over the last forty years. In this completely rewritten edition of his seminal work, Charles Jencks brings the history of architecture up to date and shows how demands for a new and complex architecture, aided by computer design, have led to more convivial, sensuous, and articulate buildings around the world.

**Sigfried Giedion** Sokratis Georgiadis, 1993 A book on

historian and architectural critic Siegfried Giedion.

*The Giedion World* Almut Grunewald, 2019 Siegfried Giedion (1888-1968) and Carola Giedion-Welcker (1893-1979) were among the most distinguished and influential scholars of art and architectural history during the 20th century's earlier decades. Of particular impact was their role in connecting leading protagonists of modernism in architecture, art, and literature, such as Alvar Aalto, Hans Arp, Constantin Brancusi, Marcel Breuer, Max Ernst, Walter Gropius, Barbara Hepworth, Le Corbusier, László Moholy-Nagy, Piet Mondrian, or Sophie Taeuber-Arp. The discourses they initiated, for example on the New Vision in photography or a 'Synthesis of Arts,' have lost nothing of their relevance and provide new starting points until the present day. The estate of Siegfried and Carola Giedion-Welcker is today kept in Zurich at ETH Zurich's Institute for the History and Theory of Architecture, the Swiss Institute for Art Research, the University of Zurich's Institute of Romance Studies, and the James Joyce Foundation. It comprises some 16,000 letters, 10,000 photographic prints and negatives, a wealth of other papers, and a vast library. This new book offers a reevaluation of Siegfried and Carola Giedion-Welcker work, impact, and lasting significance. Editor and contributors were the first to draw fully on the estate, which has been opened entirely to researchers only recently. Featuring a vast number of previously unpublished documents and other images alongside excerpts from the extensive correspondence the two maintained with their artist friends and colleagues in academia, it provides a unique and manifold insight into the 'Giedion universe.'

Reaper Richard Hamilton, Carson Chan, 2017 The starting point of this publication -- and its eponymous exhibition held in Zurich in Spring 2017 -- is the conceptual encounter between British Pop art artist, Richard Hamilton (1922-2011) and Swiss historian and critic of architecture Siegfried Giedion (1888-1968), famous for his landmark book, *Space, Time, and Architecture*

which is an influential history of modern architecture published in 1941. In 1949 Richard Hamilton -- then a member of the London-based Independent Group -- realized the, Reaper print series as a reaction to Giedion's 1948 book, *Mechanization Takes Command* in which he describes the mechanization of everyday life. Reproducing Hamilton's complete Reaper series juxtaposed with selected examples of illustrations created by Giedion alongside many related illustrations, this publication brings together seven essays by renowned international scholars, all of whom question the relationships between visual arts, technology, science, and architecture. Among the many topics discussed are Hamilton's early works and exhibition installation practice, post-war British biotechnology and architecture, Hippie Modernism, and the visual strategy of Giedion's books. Published on the occasion of the exhibition, *Reaper: Richard Hamilton and Sigfried Giedion at Graphische Sammlung ETH Zürich* (3 May - 25 June 2017). A co-operation between Graphische Sammlung ETH Zürich, gta exhibitions, and gta archive. English and German text.

**Walter Gropius** Sigfried Giedion, 1992 Presents a biographical and critical study of German architect, teacher, and industrial designer Walter Gropius, founder and leader of the Bauhaus school, sharing details of his personal and professional life.

*Modern Housing Prototypes* Roger Sherwood, 1978 Here are 32 notable examples of multi-family housing from many countries, selected for their importance as prototypes. Designed by such masters as Frank Lloyd Wright, Le Corbusier, Mies van der Rohe, and Alvar Aalto, the buildings are illustrated with photographs, site plans, floor plans, elevations, and striking axonometric drawings.

The Art of Classic Planning Nir Haim Buras, 2020-01-28 An accomplished architect and urbanist goes back to the roots of what makes cities attractive and livable, demonstrating how we can restore function and beauty to our urban spaces for the long

term. Nearly everything we treasure in the world's most beautiful cities was built over a century ago. Cities like Prague, Paris, and Lisbon draw millions of visitors from around the world because of their exquisite architecture, walkable neighborhoods, and human scale. Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years—not because of traffic, population growth, or other practical hurdles, but because of ill-considered theories emerging from Modernism and reactions to it. The errors of urban design over the last century are too great not to question. The solutions being offered today—sustainability, walkability, smart and green technologies—hint at what has been lost and what may be regained, but they remain piecemeal and superficial. In *The Art of Classic Planning*, architect and planner Nir Haim Buras documents and extends the time-tested and holistic practices that held sway before the reign of Modernism. With hundreds of full-color illustrations and photographs that will captivate architects, planners, administrators, and developers, *The Art of Classic Planning* restores and revitalizes the foundations of urban planning. Inspired by venerable cities like Kyoto, Vienna, and Venice, and by the great successes of L'Enfant's Washington, Haussmann's Paris, and Burnham's Chicago, Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world. *The Art of Classic Planning* celebrates the enduring principles of urban design and invites us to return to building beautiful cities.

*Are We Human?* Beatriz Colomina, Mark Wigley, 2016 The question *Are We Human?* is both urgent and ancient. Beatriz Colomina and Mark Wigley offer a multilayered exploration of the intimate relationship between human and design and rethink the philosophy of design in a multi-dimensional exploration from the very first tools and ornaments to the constant buzz of social media. The average day involves the experience of thousands of layers of design that reach to outside space but also reach deep

into our bodies and brains. Even the planet itself has been completely encrusted by design as a geological layer. There is no longer an outside to the world of design. Colomina's and Wigley's field notes offer an archaeology of the way design has gone viral and is now bigger than the world. They range across the last few hundred thousand years and the last few seconds to scrutinize the uniquely plastic relation between brain and artifact. A vivid portrait emerges. Design is what makes the human. It becomes the way humans ask questions and thereby continuously redesign themselves.

*Mechanization Takes Command* Sigfried Giedion, 2013 First published in 1948, *Mechanization Takes Command* is an examination of mechanization and its effects on everyday life. A monumental figure in the field of architectural history, Sigfried Giedion traces the evolution and resulting philosophical implications of such disparate innovations as the slaughterhouse, the Yale lock, the assembly line, tractors, ovens, and comfort as defined by advancements in furniture design. A groundbreaking text when originally published, Giedion's pioneering work remains an important contribution to architecture, philosophy, and technology studies.

**The Historiography of Modern Architecture** Panayotis Tournikiotis, 2001-02-27 The history of modern architecture as constructed by historians and key texts. Writing, according to Panayotis Tournikiotis, has always exerted a powerful influence on architecture. Indeed, the study of modern architecture cannot be separated from a fascination with the texts that have tried to explain the idea of a new architecture in a new society. During the last forty years, the question of the relationship of architecture to its history—of buildings to books—has been one of the most important themes in debates about the course of modern architecture. Tournikiotis argues that the history of modern architecture tends to be written from the present, projecting back onto the past our current concerns, so that the beginning of the

story really functions as a representation of its end. In this book the buildings are the quotations, while the texts are the structure. Tournikiotis focuses on a group of books by major historians of the twentieth century: Nikolaus Pevsner, Emil Kaufmann, Sigfried Giedion, Bruno Zevi, Leonardo Benevolo, Henry-Russell Hitchcock, Reyner Banham, Peter Collins, and Manfredo Tafuri. In examining these writers' thoughts, he draws on concepts from critical theory, relating architecture to broader historical models.

### **The Baroque in Architectural Culture, 1880-1980**

Andrew Leach, John Macarthur, 2016-03-09 In his landmark volume *Space, Time and Architecture*, Sigfried Giedion paired images of two iconic spirals: Tatlin's Monument to the Third International and Borromini's dome for Sant'Ivo alla Sapienza. The values shared between the baroque age and the modern were thus encapsulated on a single page spread. As Giedion put it, writing of Sant'Ivo, Borromini accomplished 'the movement of the whole pattern [...] from the ground to the lantern, without entirely ending even there.' And yet he merely 'groped' towards that which could 'be completely effected' in modern architecture-achieving 'the transition between inner and outer space.' The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture of earlier epochs is now widely acknowledged. This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography. It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque: a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism. Presenting research by an international community of scholars, this book explores through a series of cross sections the traffic of ideas between practice and history that has shaped modern architecture and the academic discipline of architectural history

across the long twentieth century. The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history. In doing so, the volume defines a role for the baroque in the history of architectural historiography and in the history of modern architectural culture.
