Pollution, Property & Prices John Harkness Dales, 2002-01-01 'Dales pointed out that traditional economic and legal solutions to pollution and resource problems were never going to be satisfactory and that a third way was needed. Today, all environmental economists of my generation recognise the debt we owe to Dales's work, as one of the intellectual foundations for emissions trading that began in California in the 1970s and now extends across the world. It is a work of immense influence which deserves reprinting.' - David Pearce, University College London, UK In this classic book, originally published in 1968 by University of Toronto Press, John Dales proposed a new policy instrument for tackling pollution problems, namely 'markets in pollution rights'. Dales was one of the first economists to put forward such a solution, and in subsequent years a system of emissions trading has evolved which is now a centrepiece in international discussions of how to address the

problem of global climate change.

Public Works and Potomac River Pollution James W. Moeller, 2010-07 Essay #29: The New Deal and the Blue Plains Advanced Wastewater Treatment Plant The Blue Plains wastewater treatment plant project epitomizes the tension felt in the early 1930s between the New Deal dilemma of the need for immediate work relief and well-planned public works projects--reminiscent of the debate surrounding the 2009 American Recovery and Reinvestment Act. Washington lawyer James Moeller brings readers a story of the bureaucratic rivalries and political drama surrounding Blue Plains. But it's a story with a happy ending, as the largest sewage treatment plant in the world transformed the Potomac River from an open sewer to the pride of the Washington region.

Running Dry Toby Craig Jones, 2015-08-06 The world's water is under siege. A combination of corporate greed, the elite pursuit of political power, and our unrelenting reliance on carbon-based energy is accelerating a broad range of environmental and political crises. Potentially catastrophic climate change, driven primarily by the consumption of oil and gas, threatens the environment in a variety of ways, including producing unprecedented patterns of heavy weather and superstorms in some places and droughts in others. Alongside intensifying environmental dangers posed by our reliance on carbon energy, the conditions of modern life, from happiness to the possibility of democratic politics, are also being undermined. In *Running Dry*, historian Toby Craig Jones explores how modern society's unquenchable thirst for carbon-based energy is endangering the environment broadly, as well as the historical roots of this threat. This accessible book examines the history of the energy-water nexus, the ways in which oil and gas extraction poison and dry up water resources, the role of corporate science in deflecting attention away from the emerging crises, and the ways in which the rush to capture more energy is also challenging America's democratic order.
